Preface to First Edition	ix
---------------------------------------	----

Part I Linear Algebra

1 Basic Vector/Matrix Structure and Notation	3
1.1 Vectors	4
1.2 Arrays	5
1.3 Matrices	5
1.4 Representation of Data	8
1.5 What You Compute and What You Don't	9
2 Vectors and Vector Spaces	11
2.1 Operations on Vectors	11
2.1.1 Linear Combinations and Linear Independence	12
2.1.2 Vector Spaces and Spaces of Vectors	13
2.1.3 Basis Sets for Vector Spaces	21
2.1.4 Inner Products	23
2.1.5 Norms	25
2.1.6 Normalized Vectors	31
2.1.7 Metrics and Distances	32
2.1.8 Orthogonal Vectors and Orthogonal Vector Spaces	33
2.1.9 The "One Vector"	34
2.2 Cartesian Coordinates and Geometrical Properties of Vectors .	35
2.2.1 Cartesian Geometry	36
2.2.2 Projections	36
2.2.3 Angles between Vectors	37
2.2.4 Orthogonalization Transformations; Gram-Schmidt	38
2.2.5 Orthonormal Basis Sets	40

2.2.6	Approximation of Vectors	41
2.2.7	Flats, Affine Spaces, and Hyperplanes	43
2.2.8	Cones	43
2.2.9	Cross Products in \mathbb{R}^3	46
2.3	Centered Vectors and Variances and Covariances of Vectors	48
2.3.1	The Mean and Centered Vectors	48
2.3.2	The Standard Deviation, the Variance, and Scaled Vectors	49
2.3.3	Covariances and Correlations between Vectors	50
	Exercises	52
3	Basic Properties of Matrices	55
3.1	Basic Definitions and Notation	55
3.1.1	Matrix Shaping Operators	59
3.1.2	Partitioned Matrices	61
3.1.3	Matrix Addition	63
3.1.4	Scalar-Valued Operators on Square Matrices: The Trace	64
3.1.5	Scalar-Valued Operators on Square Matrices: The Determinant	65
3.2	Multiplication of Matrices and Multiplication of Vectors and Matrices	75
3.2.1	Matrix Multiplication (Cayley)	75
3.2.2	Multiplication of Matrices with Special Patterns	78
3.2.3	Elementary Operations on Matrices	79
3.2.4	The Trace of a Cayley Product that Is Square	87
3.2.5	The Determinant of a Cayley Product of Square Matrices	88
3.2.6	Multiplication of Matrices and Vectors	89
3.2.7	Outer Products	90
3.2.8	Bilinear and Quadratic Forms; Definiteness	91
3.2.9	Anisometric Spaces	93
3.2.10	Other Kinds of Matrix Multiplication	94
3.3	Matrix Rank and the Inverse of a Matrix	99
3.3.1	The Rank of Partitioned Matrices, Products of Matrices, and Sums of Matrices	101
3.3.2	Full Rank Partitioning	104
3.3.3	Full Rank Matrices and Matrix Inverses	105
3.3.4	Full Rank Factorization	108
3.3.5	Equivalent Matrices	110
3.3.6	Multiplication by Full Rank Matrices	112
3.3.7	Gramian Matrices: Products of the Form $A^T A$	115
3.3.8	A Lower Bound on the Rank of a Matrix Product	117
3.3.9	Determinants of Inverses	117
3.3.10	Inverses of Products and Sums of Nonsingular Matrices	118
3.3.11	Inverses of Matrices with Special Forms	120
3.3.12	Determining the Rank of a Matrix	121
3.4	More on Partitioned Square Matrices: The Schur Complement	121
3.4.1	Inverses of Partitioned Matrices	122
3.4.2	Determinants of Partitioned Matrices	122
3.5	Linear Systems of Equations	123

3.5.1	Solutions of Linear Systems	123
3.5.2	Null Space: The Orthogonal Complement	126
3.6	Generalized Inverses	127
3.6.1	Special Generalized Inverses; The Moore-Penrose Inverse	127
3.6.2	Generalized Inverses of Products and Sums of Matrices	130
3.6.3	Generalized Inverses of Partitioned Matrices	131
3.7	Orthogonality	131
3.8	Eigenanalysis; Canonical Factorizations	134
3.8.1	Basic Properties of Eigenvalues and Eigenvectors	136
3.8.2	The Characteristic Polynomial	138
3.8.3	The Spectrum	141
3.8.4	Similarity Transformations	146
3.8.5	Schur Factorization	147
3.8.6	Similar Canonical Factorization; Diagonalizable Matrices	148
3.8.7	Properties of Diagonalizable Matrices	152
3.8.8	Eigenanalysis of Symmetric Matrices	153
3.8.9	Positive Definite and Nonnegative Definite Matrices	159
3.8.10	Generalized Eigenvalues and Eigenvectors	160
3.8.11	Singular Values and the Singular Value Decomposition (SVD)	161
3.9	Matrix Norms	164
3.9.1	Matrix Norms Induced from Vector Norms	164
3.9.2	The Frobenius Norm — The “Usual” Norm	167
3.9.3	Other Matrix Norms	169
3.9.4	Matrix Norm Inequalities	170
3.9.5	The Spectral Radius	170
3.9.6	Convergence of a Matrix Power Series	171
3.10	Approximation of Matrices	174
	Exercises	177
4	Vector/Matrix Derivatives and Integrals	183
4.1	Basics of Differentiation	184
4.2	Types of Differentiation	188
4.2.1	Differentiation with Respect to a Scalar	188
4.2.2	Differentiation with Respect to a Vector	189
4.2.3	Differentiation with Respect to a Matrix	195
4.3	Optimization of Scalar-Valued Functions	196
4.3.1	Stationary Points of Functions	198
4.3.2	Newton’s Method	198
4.3.3	Least Squares	200
4.3.4	Maximum Likelihood	204
4.3.5	Optimization of Functions with Constraints	206
4.3.6	Optimization without Differentiation	211
4.4	Integration and Expectation: Applications to Probability Distributions	212
4.4.1	Multidimensional Integrals and Integrals Involving Vectors and Matrices	213
4.4.2	Integration Combined with Other Operations	214

4.4.3	Random Variables and Probability Distributions	215
	Exercises	220
5	Matrix Transformations and Factorizations	225
5.1	Linear Geometric Transformations	227
5.1.1	Transformations by Orthogonal Matrices	228
5.1.2	Rotations	229
5.1.3	Reflections	231
5.1.4	Translations; Homogeneous Coordinates	232
5.2	Householder Transformations (Reflections)	233
5.3	Givens Transformations (Rotations)	236
5.4	Factorization of Matrices	239
5.5	LU and LDU Factorizations	240
5.6	QR Factorization	246
5.6.1	Householder Reflections to Form the QR Factorization	250
5.6.2	Givens Rotations to Form the QR Factorization	251
5.6.3	Gram-Schmidt Transformations to Form the QR Factorization	252
5.7	Factorizations of Nonnegative Definite Matrices	252
5.7.1	Square Roots	252
5.7.2	Cholesky Factorization	253
5.7.3	Factorizations of a Gramian Matrix	256
5.8	Approximate Matrix Factorization	257
5.8.1	Nonnegative Matrix Factorization	257
5.8.2	Incomplete Factorizations	258
	Exercises	259
6	Solution of Linear Systems	263
6.1	Condition of Matrices	264
6.1.1	Condition Number	265
6.1.2	Improving the Condition Number	270
6.1.3	Numerical Accuracy	270
6.2	Direct Methods for Consistent Systems	272
6.2.1	Gaussian Elimination and Matrix Factorizations	272
6.2.2	Choice of Direct Method	276
6.3	Iterative Methods for Consistent Systems	277
6.3.1	The Gauss-Seidel Method with Successive Overrelaxation	277
6.3.2	Conjugate Gradient Methods for Symmetric Positive Definite Systems	279
6.3.3	Multigrid Methods	283
6.4	Iterative Refinement	284
6.5	Updating a Solution to a Consistent System	285
6.6	Overdetermined Systems; Least Squares	286
6.6.1	Least Squares Solution of an Overdetermined System	288
6.6.2	Least Squares with a Full Rank Coefficient Matrix	290
6.6.3	Least Squares with a Coefficient Matrix Not of Full Rank	291
6.6.4	Weighted Least Squares	292

6.6.5	Updating a Least Squares Solution of an Overdetermined System	293
6.7	Other Solutions of Overdetermined Systems	294
6.7.1	Solutions that Minimize Other Norms of the Residuals	295
6.7.2	Regularized Solutions	298
6.7.3	Minimizing Orthogonal Distances	299
	Exercises	303
7	Evaluation of Eigenvalues and Eigenvectors	305
7.1	General Computational Methods	306
7.1.1	Numerical Condition of an Eigenvalue Problem	306
7.1.2	Eigenvalues from Eigenvectors and Vice Versa	307
7.1.3	Deflation	308
7.1.4	Preconditioning	310
7.1.5	Shifting	310
7.2	Power Method	311
7.3	Jacobi Method	313
7.4	QR Method	316
7.5	Krylov Methods	318
7.6	Generalized Eigenvalues	319
7.7	Singular Value Decomposition	320
	Exercises	322

Part II Applications in Data Analysis

8	Special Matrices and Operations Useful in Modeling and Data Analysis	327
8.1	Data Matrices and Association Matrices	328
8.1.1	Flat Files	328
8.1.2	Graphs and Other Data Structures	329
8.1.3	Term-by-Document Matrices	336
8.1.4	Probability Distribution Models	337
8.1.5	Derived Association Matrices	337
8.2	Symmetric Matrices and Other Unitarily Diagonalizable Matrices	338
8.2.1	Some Important Properties of Symmetric Matrices	338
8.2.2	Approximation of Symmetric Matrices and an Important Inequality	339
8.2.3	Normal Matrices	342
8.3	Nonnegative Definite Matrices; Cholesky Factorization	344
8.4	Positive Definite Matrices	346
8.5	Idempotent and Projection Matrices	350
8.5.1	Idempotent Matrices	351
8.5.2	Projection Matrices: Symmetric Idempotent Matrices	356
8.6	Special Matrices Occurring in Data Analysis	357
8.6.1	Gramian Matrices	358
8.6.2	Projection and Smoothing Matrices	360
8.6.3	Centered Matrices and Variance-Covariance Matrices	363

8.6.4	The Generalized Variance	366
8.6.5	Similarity Matrices	368
8.6.6	Dissimilarity Matrices	369
8.7	Nonnegative and Positive Matrices	369
8.7.1	Properties of Square Positive Matrices	371
8.7.2	Irreducible Square Nonnegative Matrices	372
8.7.3	Stochastic Matrices	377
8.7.4	Leslie Matrices	378
8.8	Other Matrices with Special Structures	378
8.8.1	Helmert Matrices	378
8.8.2	Vandermonde Matrices	379
8.8.3	Hadamard Matrices and Orthogonal Arrays	380
8.8.4	Toeplitz Matrices	382
8.8.5	Circulant Matrices	383
8.8.6	Fourier Matrices and the Discrete Fourier Transform	384
8.8.7	Hankel Matrices	388
8.8.8	Cauchy Matrices	389
8.8.9	Matrices Useful in Graph Theory	389
8.8.10	Z-Matrices and M-Matrices	393
	Exercises	394
9	Selected Applications in Statistics	397
9.1	Multivariate Probability Distributions	398
9.1.1	Basic Definitions and Properties	398
9.1.2	The Multivariate Normal Distribution	399
9.1.3	Derived Distributions and Cochran's Theorem	399
9.2	Linear Models	401
9.2.1	Fitting the Model	403
9.2.2	Linear Models and Least Squares	406
9.2.3	Statistical Inference	408
9.2.4	The Normal Equations and the Sweep Operator	412
9.2.5	Linear Least Squares Subject to Linear Equality Constraints	413
9.2.6	Weighted Least Squares	414
9.2.7	Updating Linear Regression Statistics	415
9.2.8	Linear Smoothing	417
9.2.9	Multivariate Linear Models	418
9.3	Principal Components	422
9.3.1	Principal Components of a Random Vector	422
9.3.2	Principal Components of Data	423
9.4	Condition of Models and Data	426
9.4.1	Ill-Conditioning in Statistical Applications	426
9.4.2	Variable Selection	427
9.4.3	Principal Components Regression	428
9.4.4	Shrinkage Estimation	429
9.4.5	Statistical Inference about the Rank of a Matrix	431

- 9.4.6 Incomplete Data 435
- 9.5 Optimal Design 438
- 9.6 Multivariate Random Number Generation 440
- 9.7 Stochastic Processes 442
 - 9.7.1 Markov Chains 443
 - 9.7.2 Markovian Population Models 445
 - 9.7.3 Autoregressive Processes 447
- Exercises 450

Part III Numerical Methods and Software

- 10 Numerical Methods** 459
 - 10.1 Digital Representation of Numeric Data 464
 - 10.1.1 The Fixed-Point Number System 464
 - 10.1.2 The Floating-Point Model for Real Numbers 466
 - 10.1.3 Language Constructs for Representing Numeric Data .. 474
 - 10.1.4 Other Variations in the Representation of Data; Portability of Data 480
 - 10.2 Computer Operations on Numeric Data 482
 - 10.2.1 Fixed-Point Operations 483
 - 10.2.2 Floating-Point Operations 484
 - 10.2.3 Language Constructs for Operations on Numeric Data .. 489
 - 10.2.4 Software Methods for Extending the Precision 491
 - 10.2.5 Exact Computations 493
 - 10.3 Numerical Algorithms and Analysis 494
 - 10.3.1 Error in Numerical Computations 494
 - 10.3.2 Efficiency 503
 - 10.3.3 Iterations and Convergence 508
 - 10.3.4 Other Computational Techniques 511
 - Exercises 515
- 11 Numerical Linear Algebra** 521
 - 11.1 Computer Storage of Vectors and Matrices 521
 - 11.2 General Computational Considerations for Vectors and Matrices 523
 - 11.2.1 Relative Magnitudes of Operands 523
 - 11.2.2 Iterative Methods 525
 - 11.2.3 Assessing Computational Errors 526
 - 11.3 Multiplication of Vectors and Matrices 527
 - 11.4 Other Matrix Computations 532
 - Exercises 535
- 12 Software for Numerical Linear Algebra** 537
 - 12.1 General Considerations 537
 - 12.1.1 Software Design 539
 - 12.1.2 Software Development, Maintenance, and Testing 548

12.1.3 Reproducible Research	551
12.2 Software Libraries	553
12.2.1 BLAS	553
12.2.2 Level 2 and Level 3 BLAS, LAPACK, and Related Libraries	555
12.2.3 Libraries for High Performance Computing	557
12.2.4 The IMSL Libraries	560
12.3 General Purpose Languages	562
12.3.1 Programming Considerations	564
12.3.2 Modern Fortran	566
12.3.3 C and C++	568
12.3.4 Python	569
12.4 Interactive Systems for Array Manipulation	570
12.4.1 R	570
12.4.2 MATLAB and Octave	578
Exercises	580

Appendices and Back Matter

A Notation and Definitions	587
A.1 General Notation	587
A.2 Computer Number Systems	589
A.3 General Mathematical Functions and Operators	590
A.4 Linear Spaces and Matrices	593
A.5 Models and Data	600
B Solutions and Hints for Selected Exercises	601
Bibliography	617
Index	631
