Preface	v
1 Statistical Methods as Optimization Problems	1
2 Basic Definitions; Properties of Functions	31
2.1 Vectors, Vector Spaces, and Matrices	31
2.1.1 Inner Products	38
2.1.2 Norms	39
2.1.3 Metrics and Distances	43
2.1.4 Orthogonal Vectors	44
2.1.5 Vectors in a Cartesian Geometry	45
2.1.6 Projections	46
2.1.7 Orthogonalization Transformations	46
2.1.8 Cones	48
2.2 Function Spaces	48
2.2.1 Inner Products, Norms, and Metrics	50
2.2.2 Basis Sets in Function Spaces	52
2.2.3 Approximation of Functions	53
2.2.4 Hilbert Spaces	55
2.3 Shapes of Sets and Functions	55
2.4 Optimization of Functions	59
2.5 Stationary Points of Differentiable Functions	62
Exercises	66
3 Finding Roots of Equations	71
3.1 Linear Equations	71
3.1.1 Direct Methods	72
3.1.2 Iterative Methods	77
3.2 Nonlinear Equations	80
3.2.1 Basic Methods for a Single Equation	80
3.2.2 Systems of Equations	93

	Exercises	96
4	Unconstrained Descent Methods in Dense Domains	99
4.1	Direction of Search	99
4.2	Line Searches	100
4.3	Steepest Descent	103
4.4	Newton's Method	103
4.5	Accuracy of Optimization Using Gradient Methods	106
4.6	Quasi-Newton Methods	106
4.7	Fitting Models to Data Using Least Squares; Gauss-Newton Methods	110
4.8	Iteratively Reweighted Least Squares	114
4.9	Conjugate Gradient Methods	116
4.10	The EM Method and Some Variations+	116
4.11	Fisher Scoring+	120
4.12	Stochastic Search Methods	121
4.13	Derivative-Free Methods	122
4.13.1	Nelder-Mead Simplex Method	122
4.13.2	Price Controlled Random Search Method	125
4.13.3	Ralston-Jennrich Dud Method for Least Squares	126
4.14	Summary of Continuous Descent Methods	128
	Exercises	129
5	Unconstrained Combinatorial Optimization; Other Direct Search Methods	133
5.1	Simulated Annealing	134
5.2	Evolutionary Algorithms	139
5.3	Guided Direct Search Methods	143
5.4	Neural Networks+	144
5.5	Other Combinatorial Search Methods	147
	Exercises	148
6	Optimization under Constraints	151
6.1	Constrained Optimization in Dense Domains	152
6.1.1	Equality Constraints	152
6.1.2	Linear Programming	155
6.1.3	Duality	155
6.1.4	General Constrained Optimization over Dense Domains	155
6.2	Constrained Combinatorial Optimization	157
	Exercises	160
7	Multiple Extrema and Multiple Objectives	163
7.1	Multiple Extrema and Global Optimization	163
7.2	Optimization with Multiple Criteria	164
7.3	Optimization under Soft Constraints	166

Exercises 167

8 Applied Optimization: Numerical Methods and Software .. 169

8.1 Numerical Computations 169

8.2 Computer Storage and Manipulation of Data 169

8.2.1 The Floating-Point Model for the Reals 170

8.2.2 The Fixed-Point Number System 179

8.3 Numerical Algorithms and Analysis 181

8.3.1 Error in Numerical Computations 182

8.3.2 Efficiency 187

8.3.3 Formulas and Algorithms 191

8.4 Software for Optimization 192

8.4.1 Fortran and C Libraries 193

8.4.2 Optimization in General-Purpose Interactive Systems .. 199

8.4.3 Software for General Classes of Optimization Problems . 199

8.5 Modeling Languages and Data Formats 202

8.6 Testbeds for Optimization Software 202

Exercises 204

9 Selected Applications in Statistics 207

9.1 Fitting Models by Minimizing Residuals 214

9.1.1 Statistical Inference Using Least Squares 218

9.1.2 Fitting Using Other Criteria for Minimum Residuals ... 218

9.1.3 Fitting by Minimizing Residuals while Controlling
Influence 224

9.1.4 Fitting with Constraints 224

9.1.5 Subset Regression; Variable Selection 225

9.1.6 Multiple Criteria Fitting 226

9.1.7 Regularized Minimization 226

9.2 Nonparametric Smoothing 226

9.3 Maximum Likelihood Estimation 226

9.3.1 The Maximum Likelihood Approach 226

9.3.2 Maximum Likelihood Estimation with Constraints 229

9.3.3 Penalized Maximum Likelihood Estimation 230

9.4 Optimal Design and Optimal Sample Allocation 230

9.4.1 D-Optimal Designs 230

9.4.2 Optimal Sample Allocation 233

9.5 Clustering and Classification* 236

9.6 Multidimensional Scaling 236

9.7 Time Series Forecasting* 236

Exercises 236

A Notation and Definitions 241

Bibliography 255
