Date of Homework Assigned: 1st Class Session

Date of Homework Due: Refer to homework schedule posted on the course web site.

Summary:

This project will introduce you to the use of the Java development environment. You will create the classic “Hello World” program in order to gain familiarity with the JAVA development environment. Highly suggest that you use the NetBeans development environment available on the Internet from Sun Microsystems (http://java.sun.com). You should consult a standard Java reference to assist you in the completion of this assignment.

Description:

You are to create a Java program called HelloWorld.java that creates a single main program. The main program should print strings that specify: “Hello World”, your complete name, student ID, current date, and an text constant that identifies this course (INFS601-1 Spring 2006”).

Your program will be graded with the Java 5.0 JDK (JSEE). If you use any non standard packages you do so at your own risk.

More details on how to submit your (including your executable) project to the TA will be forthcoming. At a minimum, submit your source code and a screenshot of the program’s execution to the instructor.
