Distributions II and misc. topics

What is reverse lookup?

Be able to use and apply reverse lookup.

Be able to name some other distributions (other than the binomial and normal).

You don't need to know how to use them, just their names.

What is the mean (μ) of a binomial distribution? What is the standard deviation (σ)?

What about the normal distribution?

What is an expected value?

Again, make sure you understand the difference between estimates and parameters.
