

Welcome to recitation for MATH:113!

Keep this sheet — each group should turn in a copy at the end of class.

Team members: _____

Individually, take 1-2 minutes to think about these questions. After you've thought about answers, discuss them with your teammates.

1. What is something *not math-related* that you're good at? How did you get good at it?
2. How do *you* learn something new?
3. What's the value of making mistakes while learning?
4. What makes you feel confident in a learning environment?

Individually, take 1-2 minutes to answer these questions. Then, **as a team**, take five minutes to discuss them, possibly using answers to previous questions.

1. What is the best experience you've had working in a group? What's the worst one?
2. What's one thing a teammate can do to help you succeed in this class?
3. What's one thing *you* can do to help others succeed in this class?

After you've finished talking about these questions, **come up with three things a team can do to be successful** and write them on your whiteboard. We'll then talk about your ideas as a class!
