Overview

A task analysis is a description of the breakdown of a job duty into its component tasks, which are then further divided into the steps and sub-steps required to complete the job. In addition, the task analysis documents the knowledge and information needed by the performer to carry out the job effectively.

The purpose of a task analysis is to answer the questions, “What does the person performing the job in question actually do?” and “What does the person need to know in order to perform the tasks that define that job?” The answers to these questions help determine the instructional goals and objectives of the project, and consequently, identify effective instructional strategies needed to train someone to perform the job.

To find the answers to the questions above, the MSHA project team analyzed the diagrams, called the job task analysis spiders (JTAs), created by CONSOL Energy and Excel Mining that identify and describe the duties performed by coal mine supervisors at the respective companies. Based upon our analysis, a generic set of JTAs was developed. A cognitive task analysis (explained later in this document) was performed on these generic duties to categorize them according to their associated intellectual skill domains. As a result, learning hierarchies were formulated.

The New Generic JTA

The JTAs created by CONSOL Energy and Excel Mining differed in their breakdown of the duties performed by mine supervisors. For example, CONSOL determined that there were thirteen duties, whereas Excel Mining identified fifteen supervisory duties. The MSHA subject matter expert determined that some duties described by the two mines were company-specific and would not necessarily translate to operations within smaller mines with fewer resources.

Using both sets of JTA spiders as a foundation, the team (with assistance from subject matter expert), developed a set of generic JTAs that represent the high-level duties performed by mine supervisors in general (See Appendix A). The job was categorized into twelve top duties, and each top duty is completed by sequential steps/tasks. Further, the duties were assigned a rating which was used to prioritize the most significant in regard to safety factors. The ratings include:

- 1 = Important
- 2 = Very Important
- 3 = Critical

A task labeled as “1” would have marginal safety effect if not properly completed. A level “2” task may cause significant, but non-fatal effects if not properly completed. A “3” or critical task may cause fatalities or have a catastrophic effect if not completed properly.

For the purposes of developing a training strategy, the *important* (2) and *critical* (3) tasks will receive primary consideration for development. A companion worksheet was submitted to an MSHA subject matter expert for further review and comment (See Appendix B). Table 1 below represents a summary of job-related tasks.

Table 1: Job-Related Duties

Duty/High-Level Task	Description	Tasks	Importance Rating
1. Self Assessment and Personal Fitness	Preparing for a safe and healthful work shift for himself/herself and crew through self-assessment and personal fitness determinations prior to start of shift	1.1. Conduct self-assessment	2
		1.2. Be prepared to deal with employee problems/concerns	2
2. Start of Shift Activities	Conducting start-of-shift activities	2.1. Arrive on time to review reports and records	
		2.2. Review records and reports at mine office	3
		2.3. Talk to previous shift foreman	2
		2.4. Take pre-shift phone call	3
3. Prior to Entering the Mine	Conducting the required activities prior to entering the mine	3.1. Check for and/or obtain necessary safety equipment	3
		3.2. Obtain necessary tools and equipment	2*
		3.3. Check crew	3
		3.4. Perform check-in at the mine	3
4. Entering the Mine	Properly boarding and traveling into the mine by slope car and/or elevator	4.1. Conduct smoke search	3
		4.2. Board slope car	
		4.3. Board elevator	
		4.4. Board mantrip	
5. Travel to the Section	Properly traveling to the section by rail and rubber-tired mantrip	5.1. Board mantrips	3*
		5.2. Observe conditions while traveling	3*
		5.3. Park mantrip	3*
6. Arrive on the Section	Conducting the appropriate activities upon arrival on the section.	6.1. Meet with previous shift foreman for switch-off discussion	2
		6.2. Monitor equipment operators pre-op examination	
		6.3. Verify hot seating procedures	1

Duty/High-Level Task	Description	Tasks	Importance Rating
		6.4. Proceed to the section feeder	
7. Section Observation	Conducting a safe and thorough section observation	7.1. Monitor start-up	2
		7.2. Check for hazardous conditions and methane	3
		7.3. Monitor employee activities	3
		7.4. Monitor equipment	2
		7.5. Assure supplies and tools are available to complete assigned tasks	2
		7.6. Assure center lines are installed prior to a place being mined	2
		7.7. Coordinate anticipated downtime	1
8. Conduct On-shift Examination	Conducting a proper and thorough on-shift examination	8.1. Examine faces	3
		8.2. Examine other areas of section	3
		8.3. Observe location and physical conditions of cables	2
		8.4. Check for first aid equipment	2
9. Conduct Pre-shift Examination	Conducting a proper and thorough pre-shift examination	9.1. Examine section tail piece and perform checks	2*
		9.2. Examine haulway	2*
		9.3. Conduct dust parameter examination	2
		9.4. Examine battery charging station	2*
		9.5. Examine faces and immediate returns	2
		9.6. Monitor roof control requirements	2
		9.7. Examine power center	2
		9.8. Call results out to the oncoming shift	3
10. End of Shift	Conducting a proper and thorough	10.1. Talk to oncoming section foreman	3

Duty/High-Level Task	Description	Tasks	Importance Rating
	end-of-shift examination	10.2. Ensure that all employees have checked out of the mine	2
		10.3. Order immediately needed supplies	2
		10.4. Communicate with shift foreman and chief electrician	2
		10.5. Charge methane detectors according to shift	2
		10.6. Review and sign pre-shift books	3
		10.7. Complete production and delay report	2
11. Emergency and Unusual Situations	Effectively handling emergency or unusual situations	11.1. Account for all personnel	3
		11.2. Ensure communications	3
		11.3. Make sure that all SCSRs are gathered and available	3
		11.4. Assess situation	3
		11.5. Address fire/explosion	3
		11.6. Address inundations	3
		11.7. Address serious injury	
		11.8. Address unintentional roof falls	
		11.9. Conduct or schedule training	
12. Training Responsibilities	Conducting and monitoring required training	12.1. Conduct escape and evacuation training	3
		12.2. Conduct or monitor task training	3
		12.3. Conduct or monitor hazard training	3
		12.4. Conduct "Introduction to the Work Environment" tour	3

* Indicates tasks containing subtasks with rating shown.

Cognitive Task Analysis

The goal of a cognitive task analysis is to identify the cognitive skills that are needed for task performance. More specifically, it is used to identify and take into account the cognitive requirements inherent in performing tasks. This includes the knowledge, mental processes, and decisions that are required to execute tasks.

In examining the JTAs, the primary objective of the cognitive task analysis was to provide an overview of mine supervisor decision-making tasks, the sources of complexity contained within those tasks, and the knowledge and skills required to properly complete tasks.

Using the CONSOL Energy and Excel mining JTAs, the MSHA project team conducted a cognitive task analysis of the all the duties performed by supervisors. Using a learning taxonomy, the analysis included an examination of the intellectual skills used in the execution of supervisory tasks. The project team found that a small number of mid and lower-level tasks required verbal information, the citing of facts in verbal or written form, which is represented in Gagné's Five Learned Capabilities. However, the majority of tasks performed by supervisors required rule-using skills, while the overall job performed by a supervisor encompassed problem-solving skills. Rule-using is defined as applying a rule to a given situation or condition by responding to a class of inputs with a class of actions (Gagné, R.M. and Briggs, L.J., 1974). In addition, problem-solving is defined as combining lower level rules to solve problems in a situation never encountered by the person solving the problem (Gagné, R.M. and Briggs, L.J., 1974). Figure 1 is a hierarchical representation of the learning taxonomy used in the analysis process.

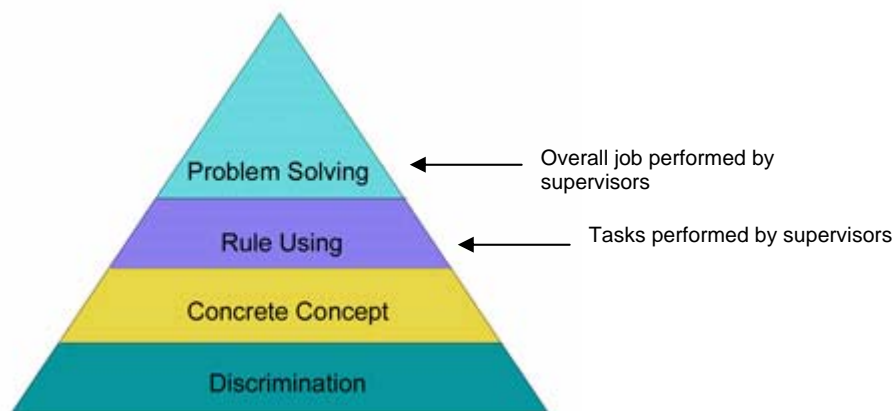

Figure 1: Gagne's Intellectual Skills Domain

With cognitive task analysis method, the project team was able to separate the high-level duties performed by supervisors into two rule-using categories, procedural and principle. Procedural rule-using tasks (1-10) are those that follow a set of predefined steps to ensure that all components of that task are completed properly. This requires recalling a large

body of interconnected facts. Principle rule-using tasks (11-12) are actions that can be converted into “if-then” situations; these include emergency and unusual situations and training responsibilities. As stated above, it was determined that the overall job of a supervisor requires problem-solving skills.

OVERALL JOB PERFORMED BY SUPERVISORS (Requires problem-solving skills)	
Requires rule-using (procedural) skills	Duty 1: Self-Assessment and Personal Fitness
	Duty 2: Start-of-Shift Activities
	Duty 3: Prior to Entering the Mine
	Duty 4: Entering the Mine
	Duty 5: Traveling to the Section
	Duty 6: Arrive on the Section
	Duty 7: Section Observation
	Duty 8: Conduct On-Shift Examination
	Duty 9: Conduct Pre-Shift Examination (for the next shift)
	Duty 10: End-of-Shift Examination
Requires rule-using (principle) skills	Duty 11: Emergency or Unusual Situations
	Duty 12: Training Responsibilities

For each of the duties listed above, the mine supervisor must be able to explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls. The first ten duties describe steps in the normal work day of a supervisor. The final two duties describe necessary elements of a supervisor’s knowledge base and responsibilities that are not necessarily everyday occurrences.

Learning Hierarchy

For instructional purposes, the outcome of the cognitive task analysis of the generic JTA is to determine the learning hierarchy, which is composed of the learning objectives and the pre-requisite skills in a hierarchical order. The learning objectives are defined based on the optimal performance of the supervisory job duties that were identified during the job task analysis. The overall supervisory job, which is identified at the problem solving level, is the terminal objective of the learning hierarchy. The twelve duties in the JTA are identified as the rule using, procedural or principle level. Figure 2 presents the highest level of the learning hierarchy. It shows that a supervisor must know how to accurately perform the twelve duties before being qualified to carry out the supervisory job.

The twelve duties form the next level of the learning hierarchy. These duties show the prerequisite knowledge that a supervisor must have. For example, Duty 2 identifies the knowledge needed in order to conduct start-of-shift activities. Figure 3 shows the learning hierarchy of the prerequisite skills.

The learning hierarchy helps the MSHA team to identify and order the learning objectives according to the intellectual skill domain and their prerequisites. Based on the learning hierarchy, the team will apply the appropriate instructional strategies and methods to teach the tasks according to their intellectual skill domains.

Conclusion

The original JTAs were created by two commercial coal mining companies to reflect what a section foreman would do in a workday. The design team converted the individual mines' interpretations of coal mine supervisor's duties to pertinent generic duties and aligned these duties and tasks to valid instructional design taxonomies.

Our next steps will include selecting the tasks rated in the generic JTA and to narrow the scope of possible learning strategies. Using the learning hierarchy as determined by the cognitive task analysis, the design team will construct the learning objectives, determine the instructional sequence and apply the appropriate instructional strategies and methods.

The Highest Level Learning Hierarchy

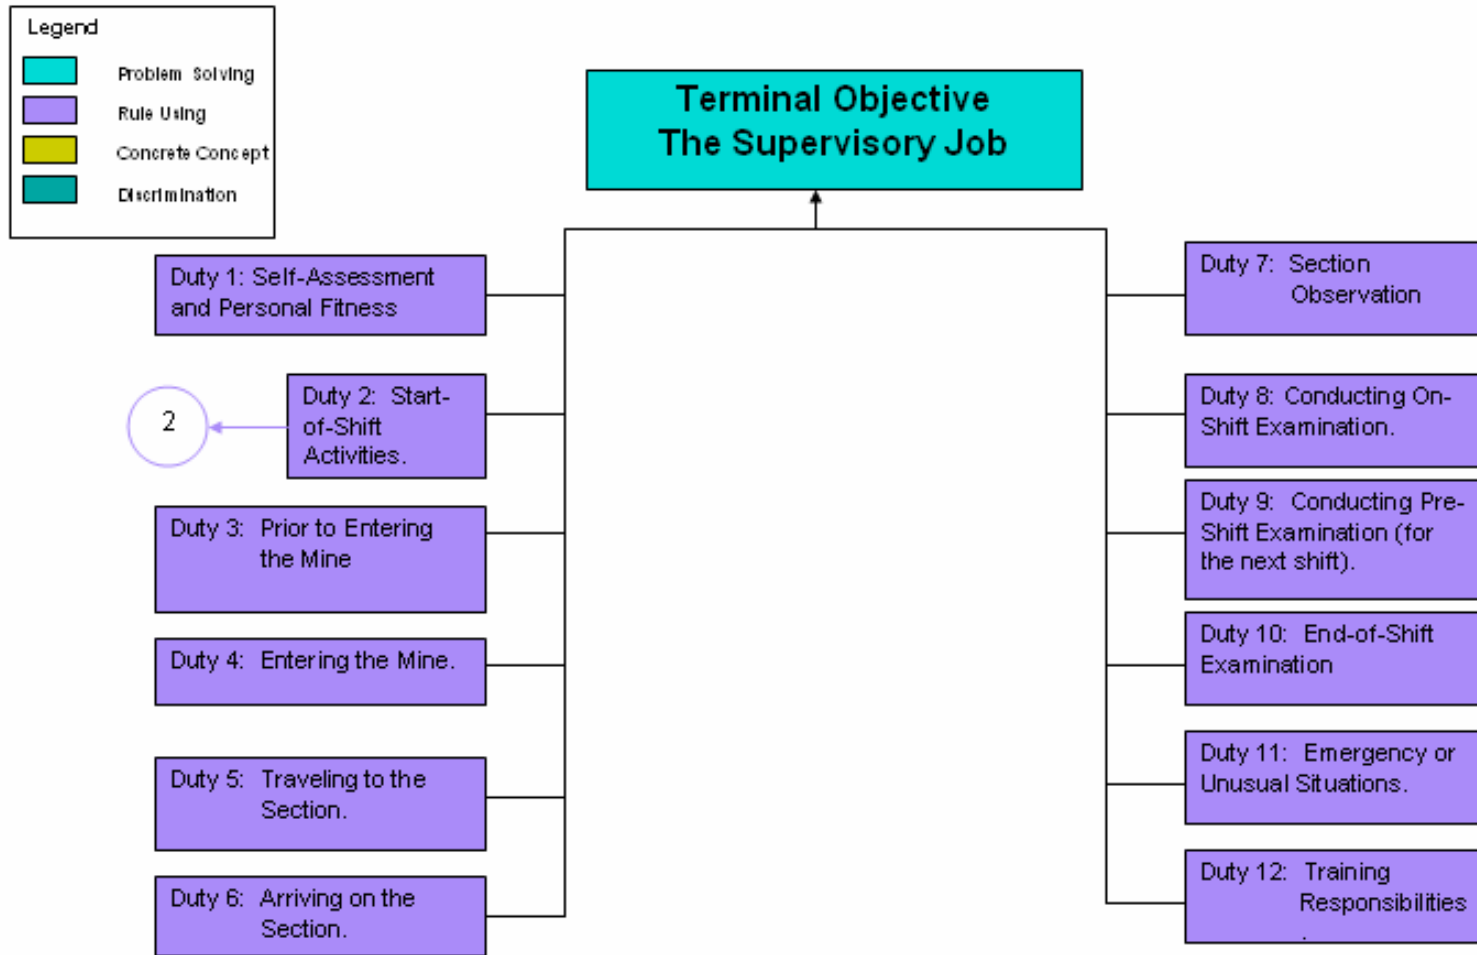

Figure 2: Highest Level Learning Hierarchy

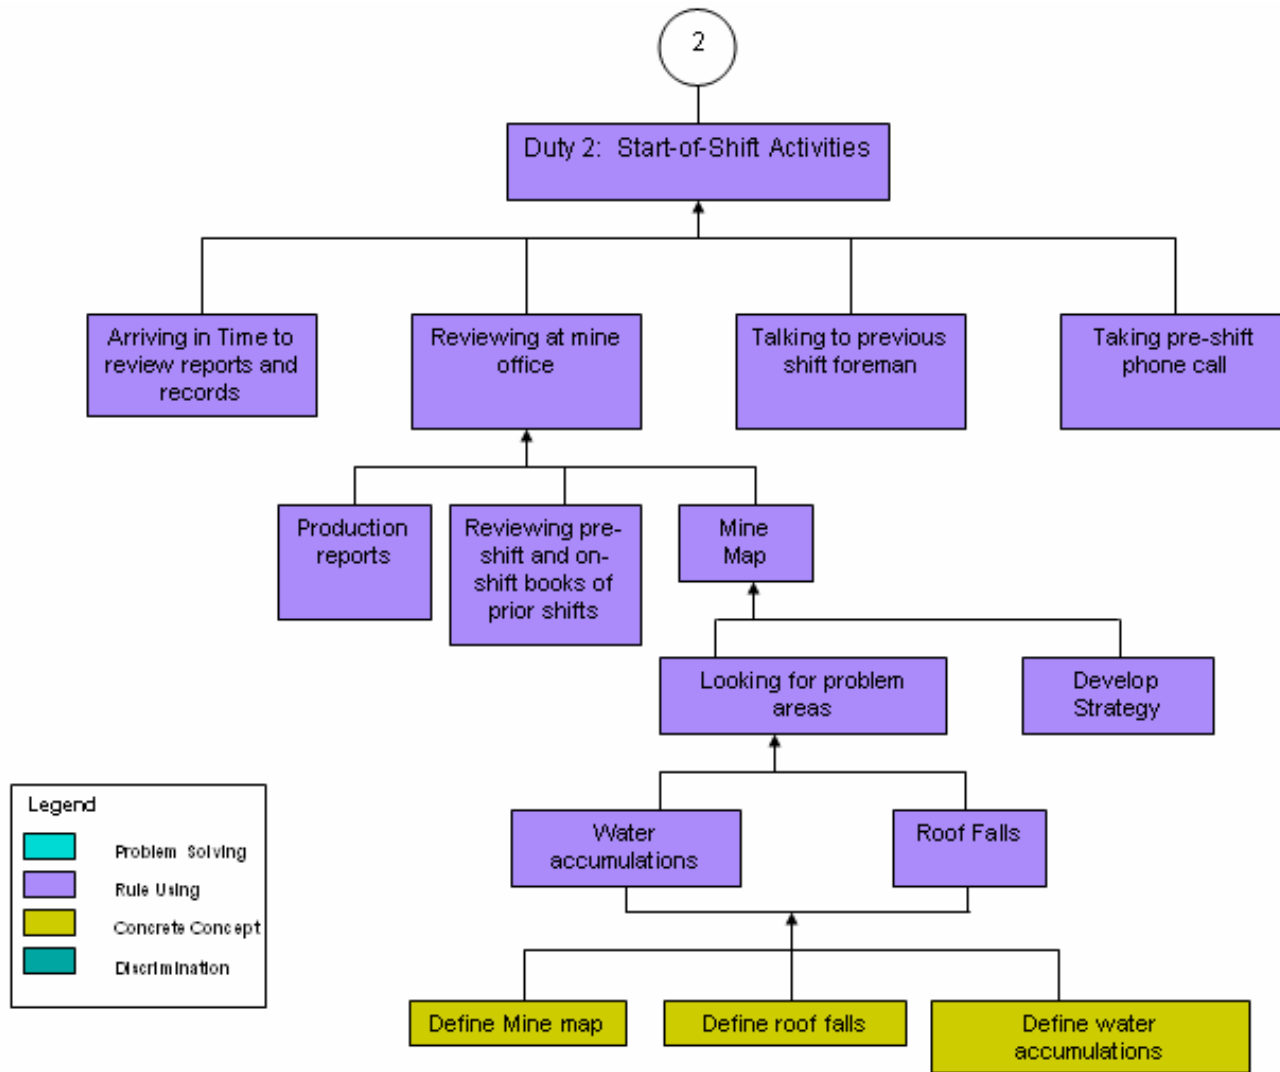

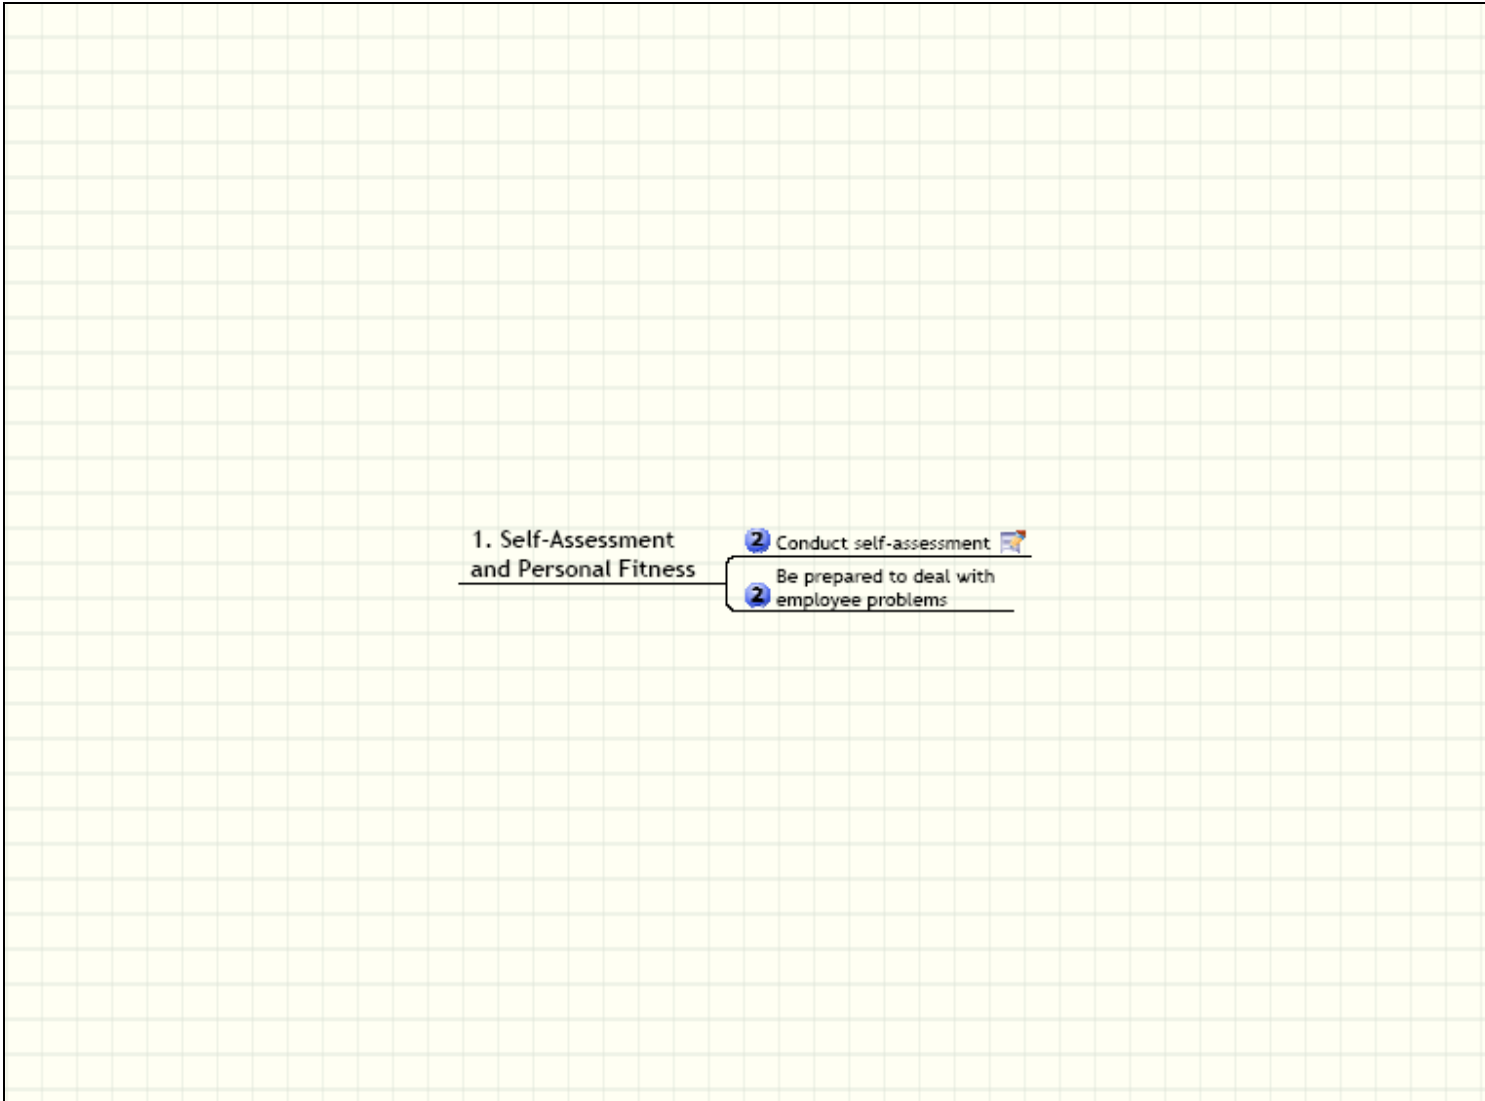

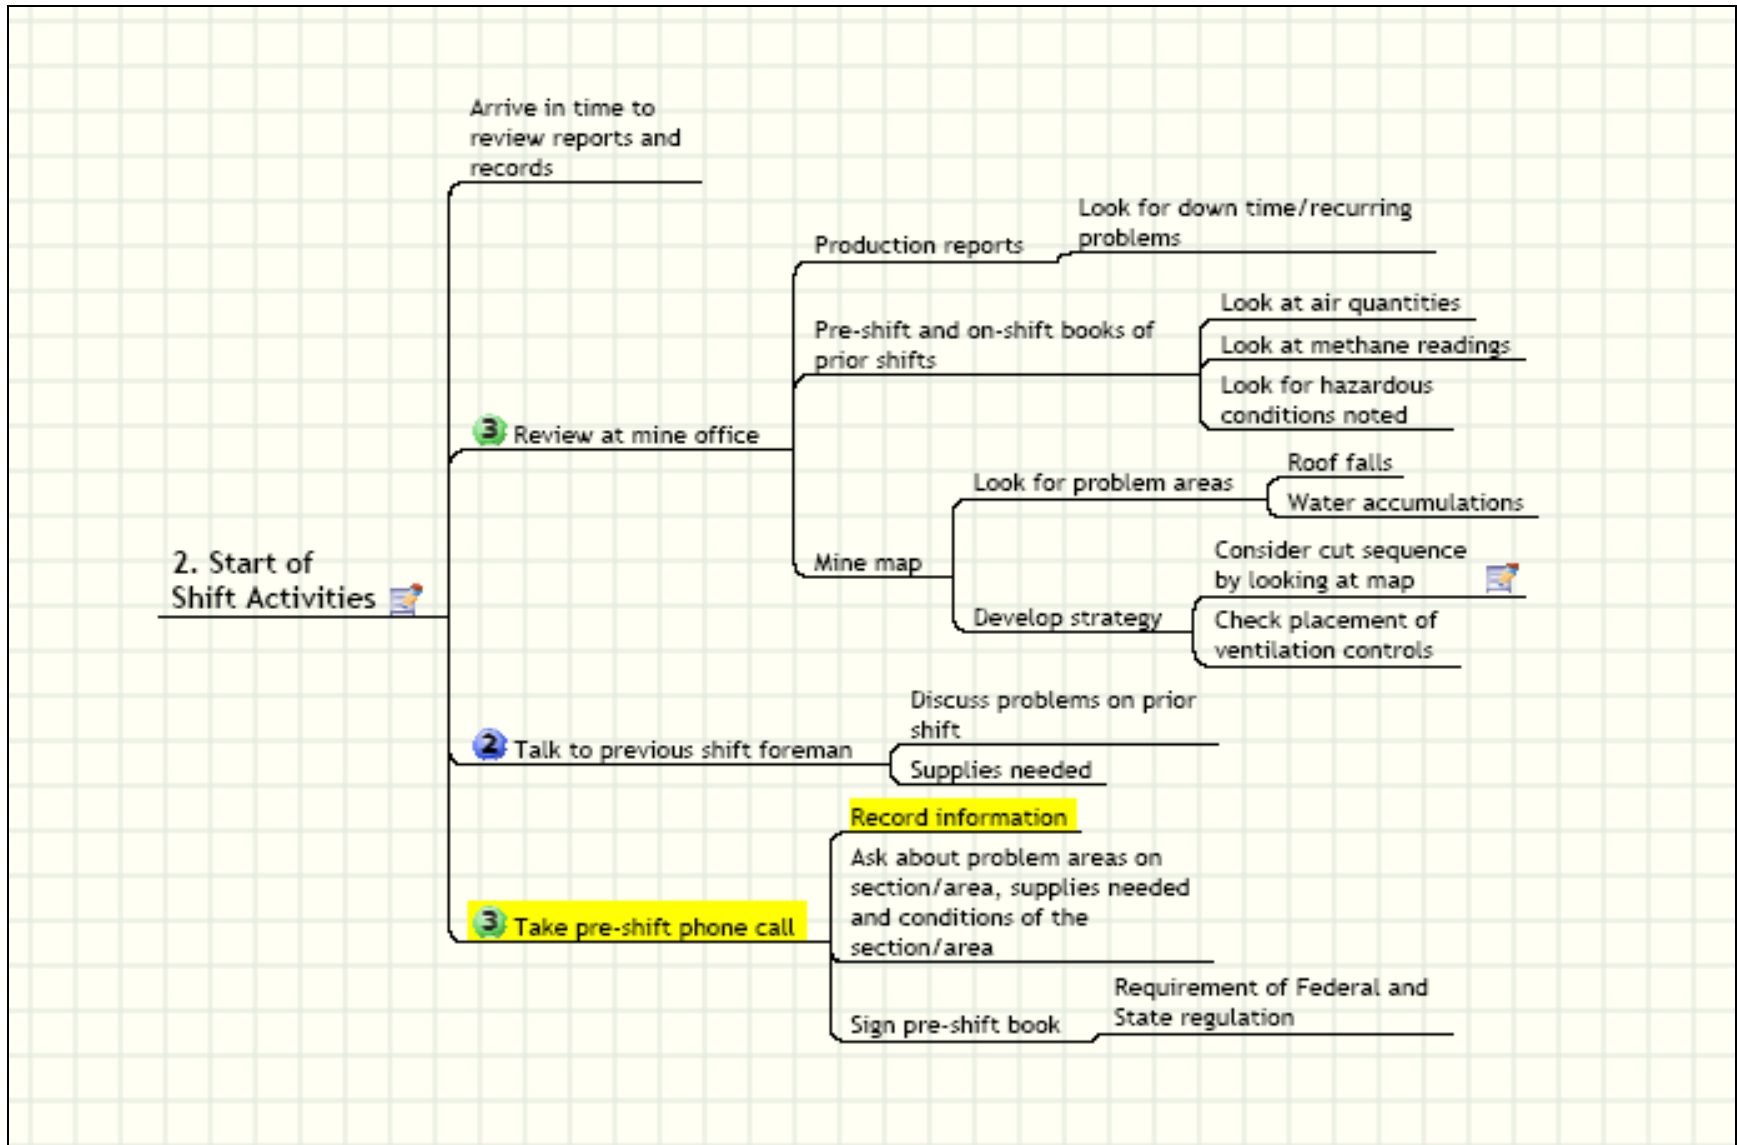

Figure 3: Learning Hierarchy - Duty 2

Appendix A: Generic JTA Diagrams

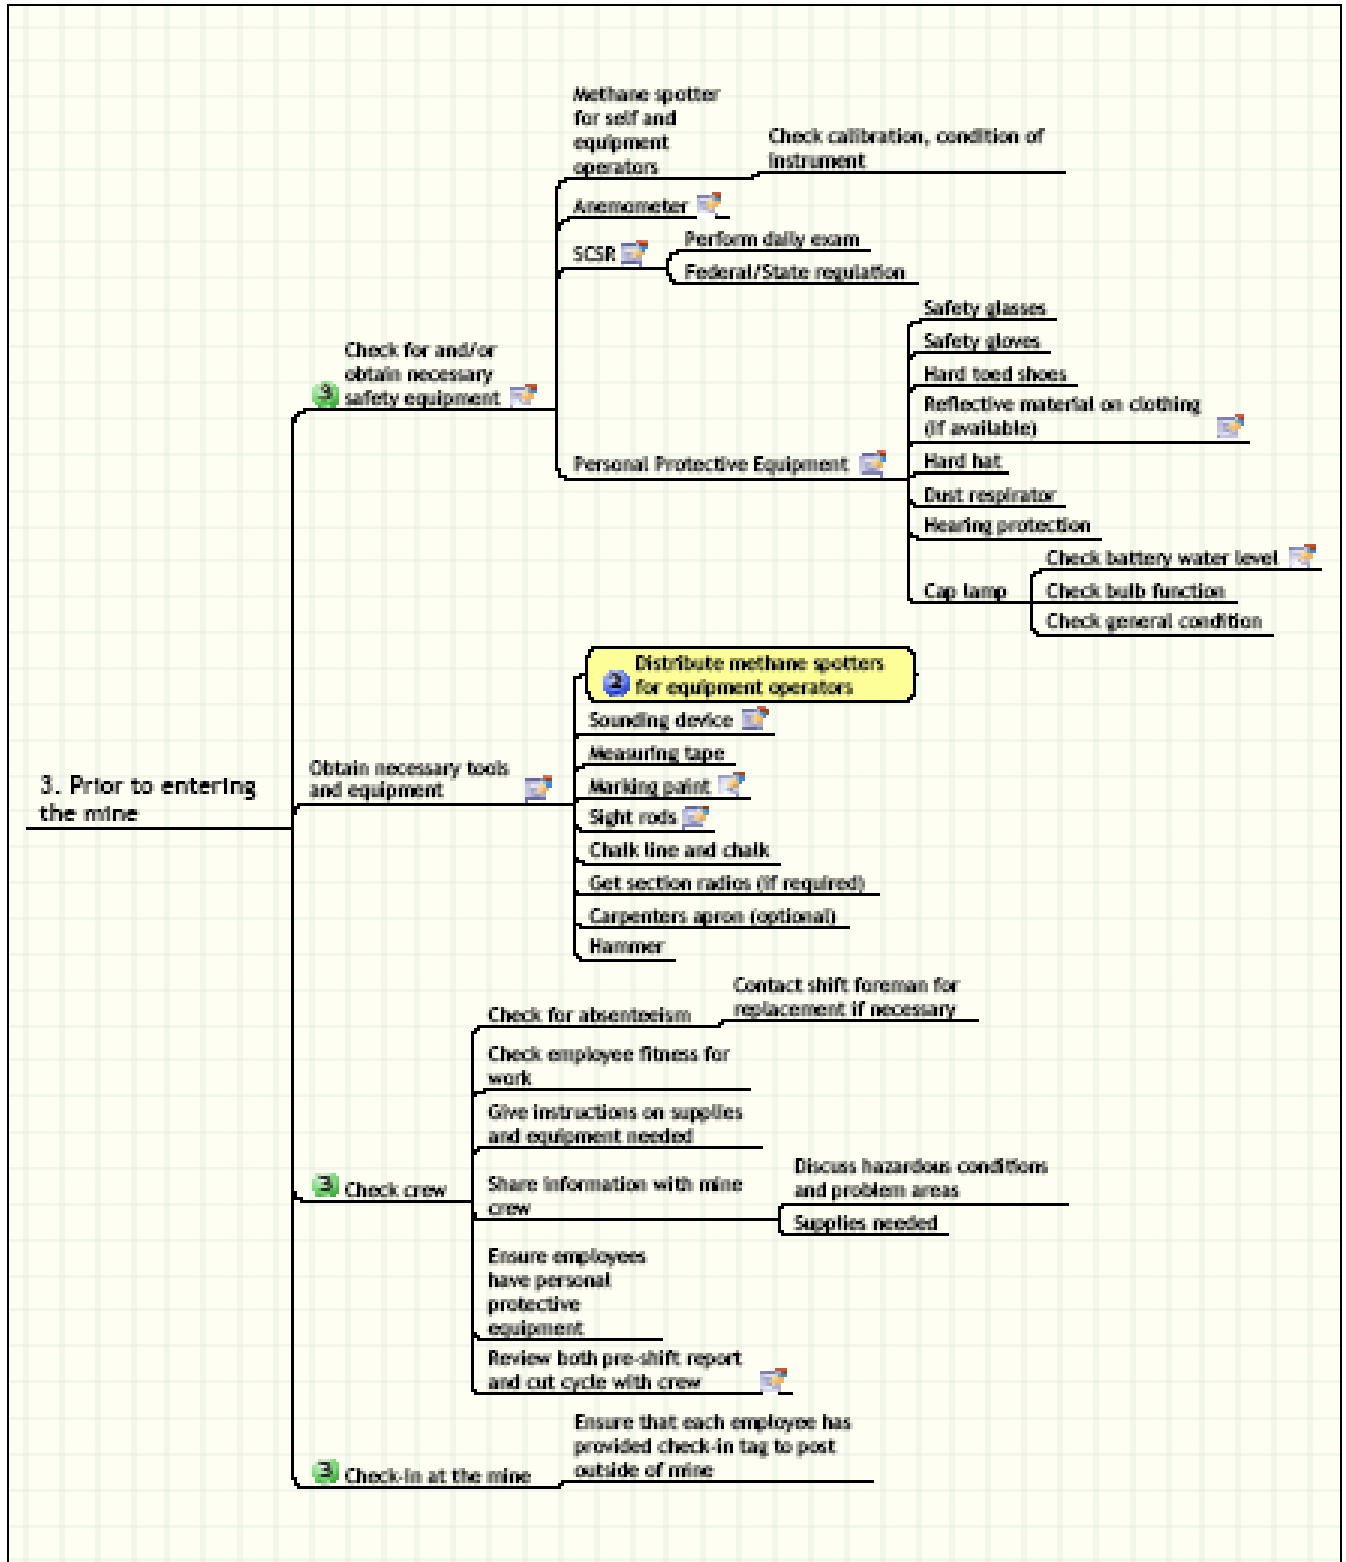

Duty 1: Self-Assessment and Personal Fitness

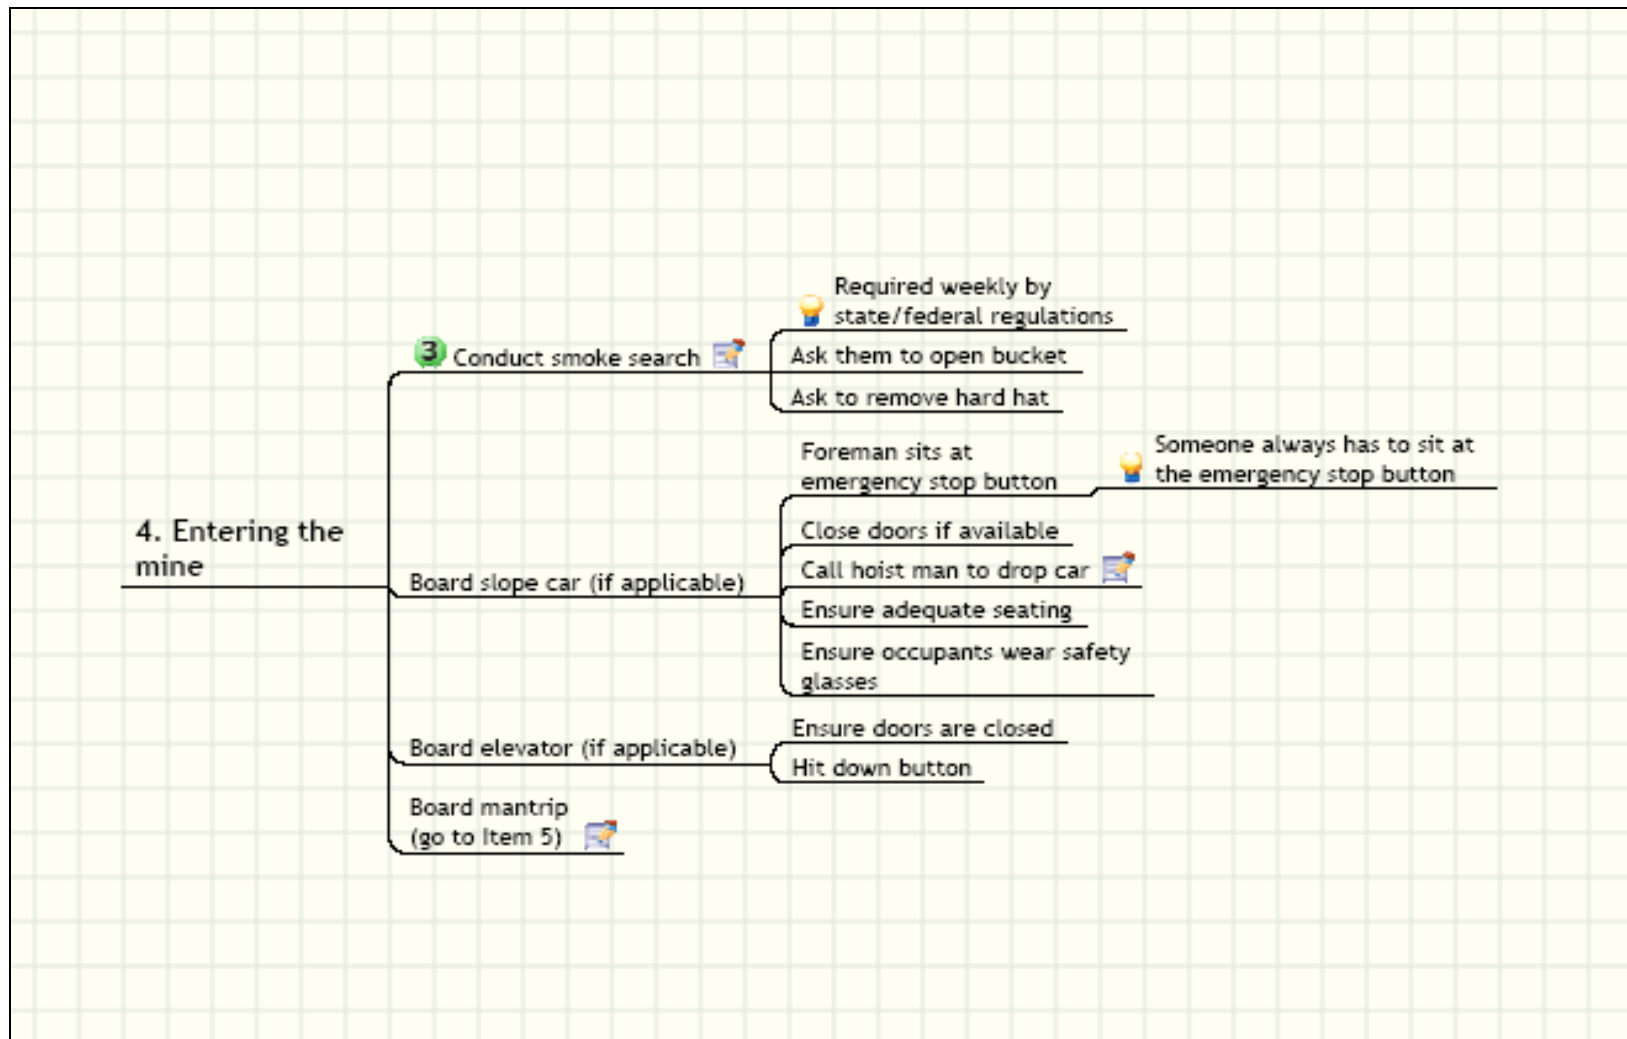

Duty 2: Start of Shift Activities

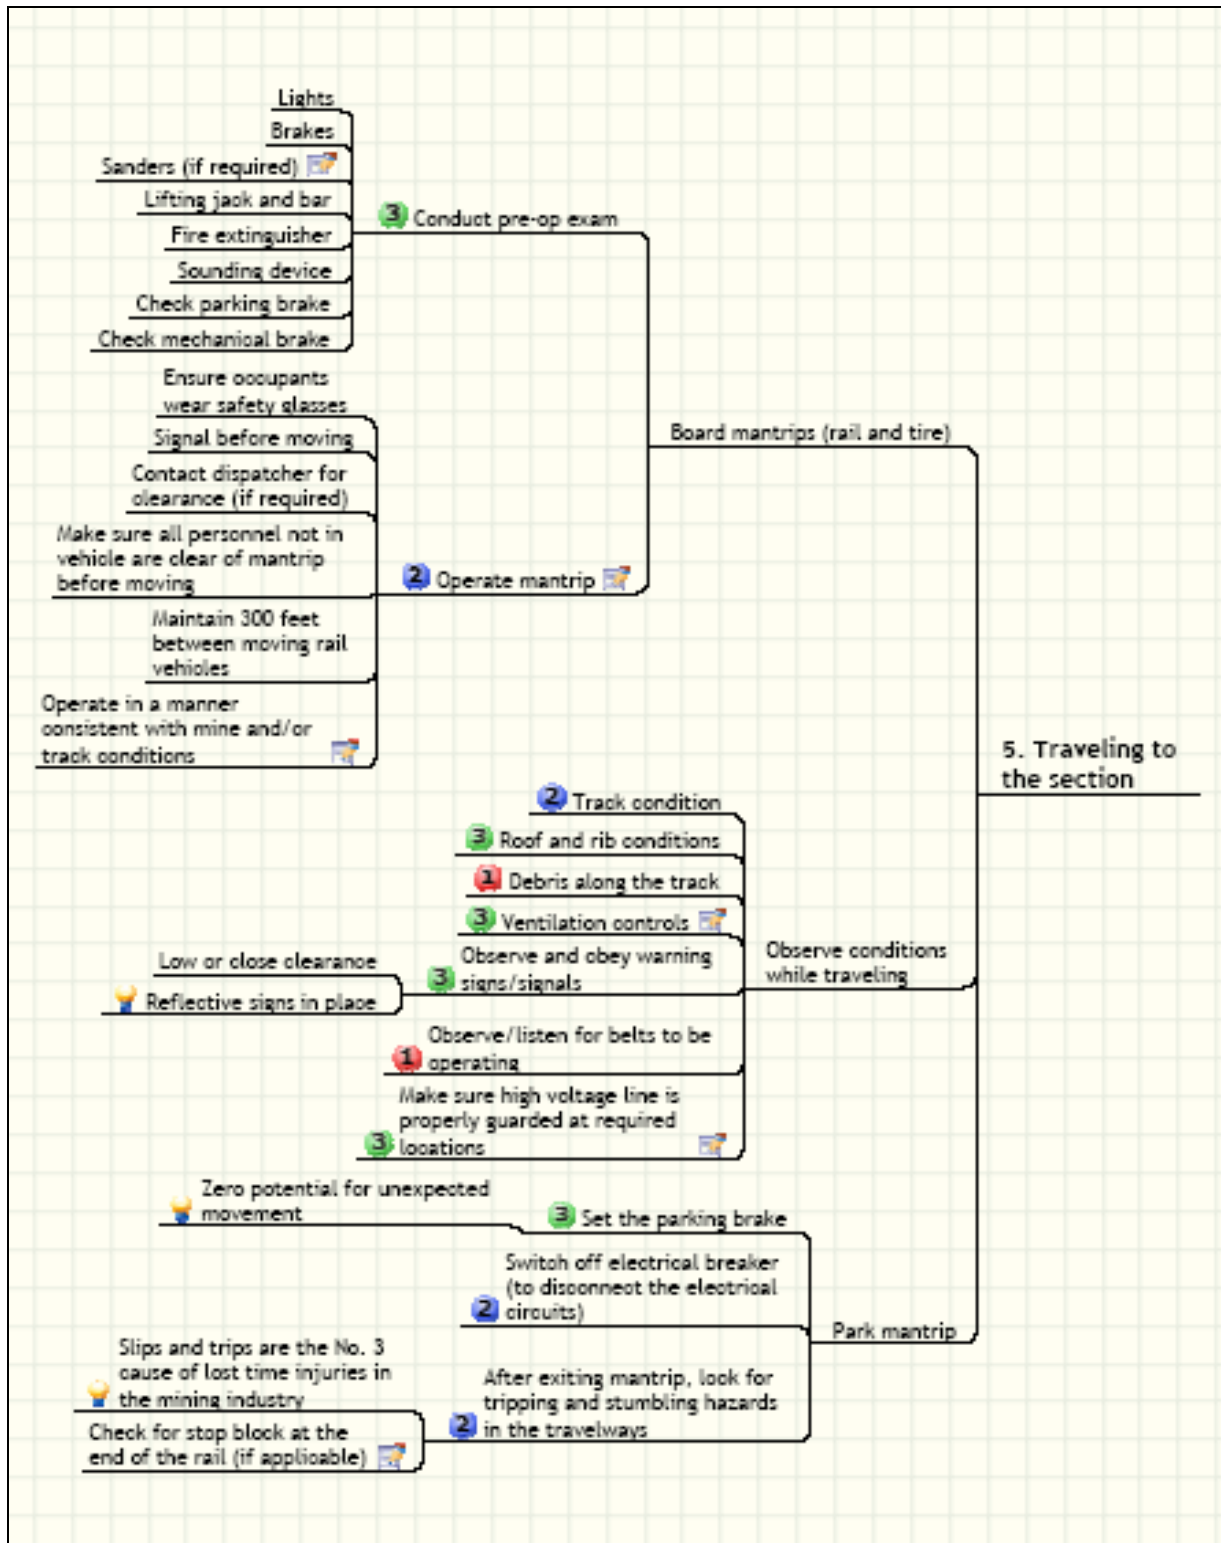

Duty 3: Prior to Entering the Mine

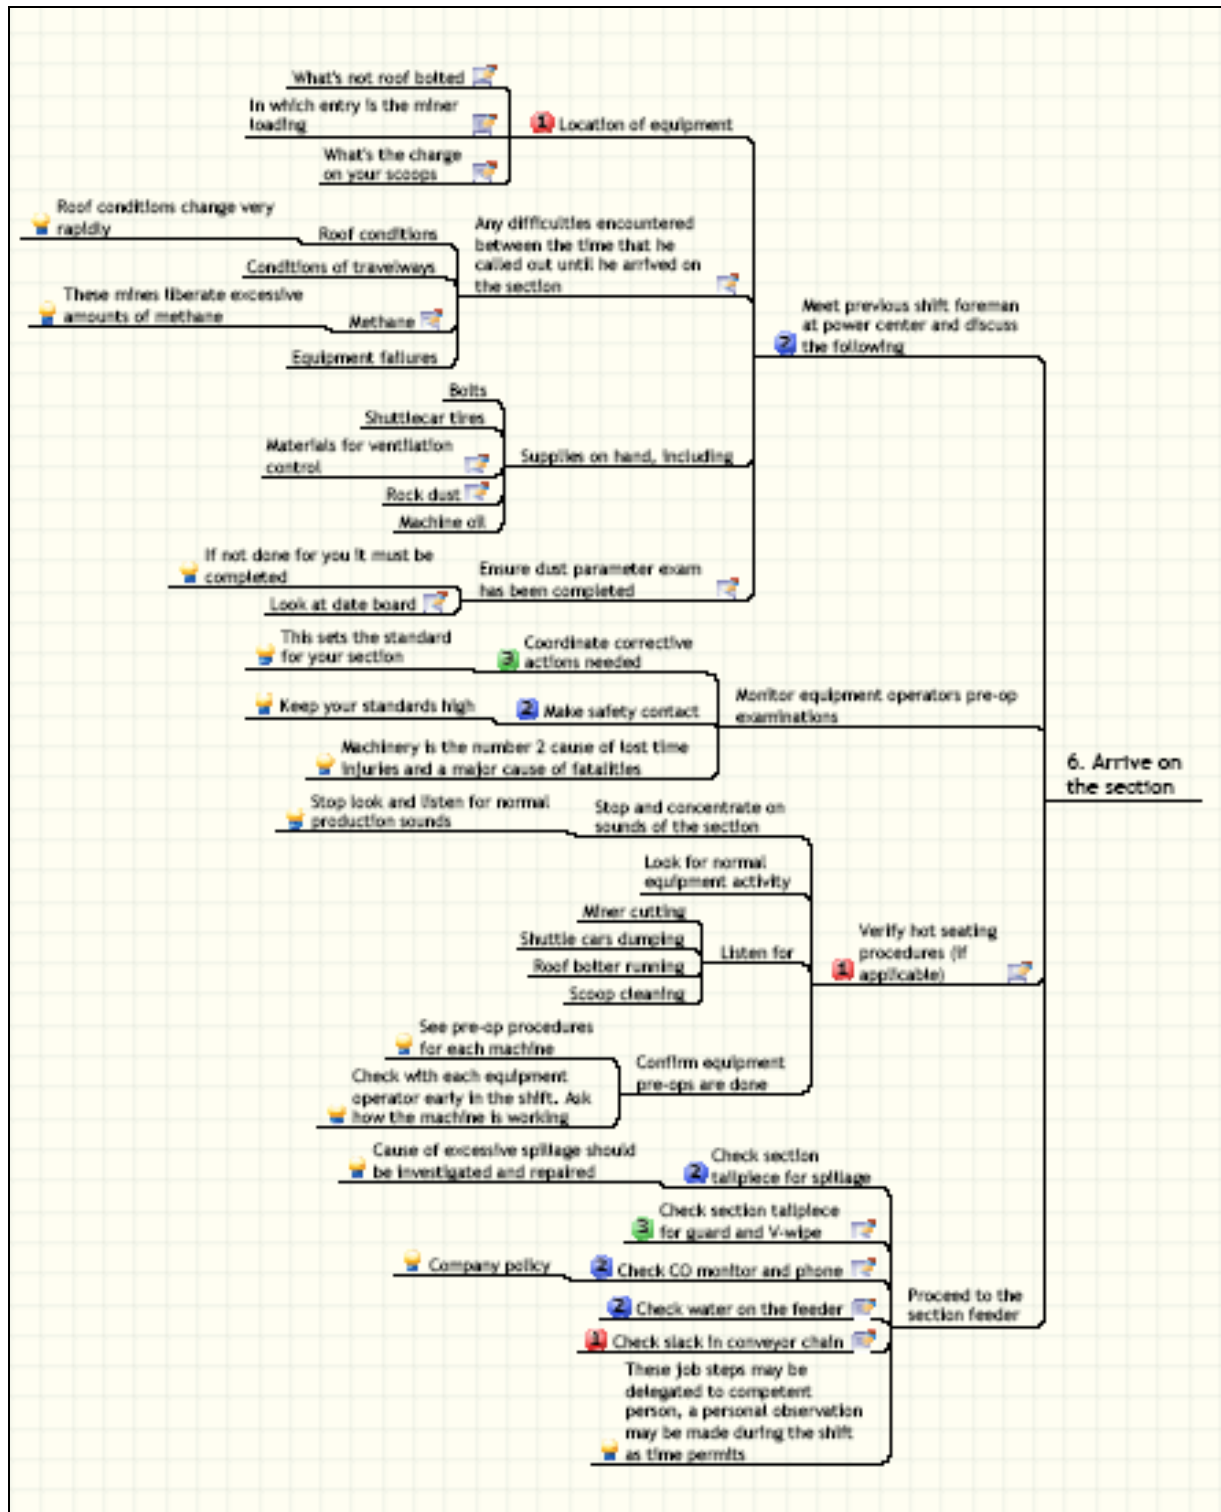

Duty 4: Entering the Mine

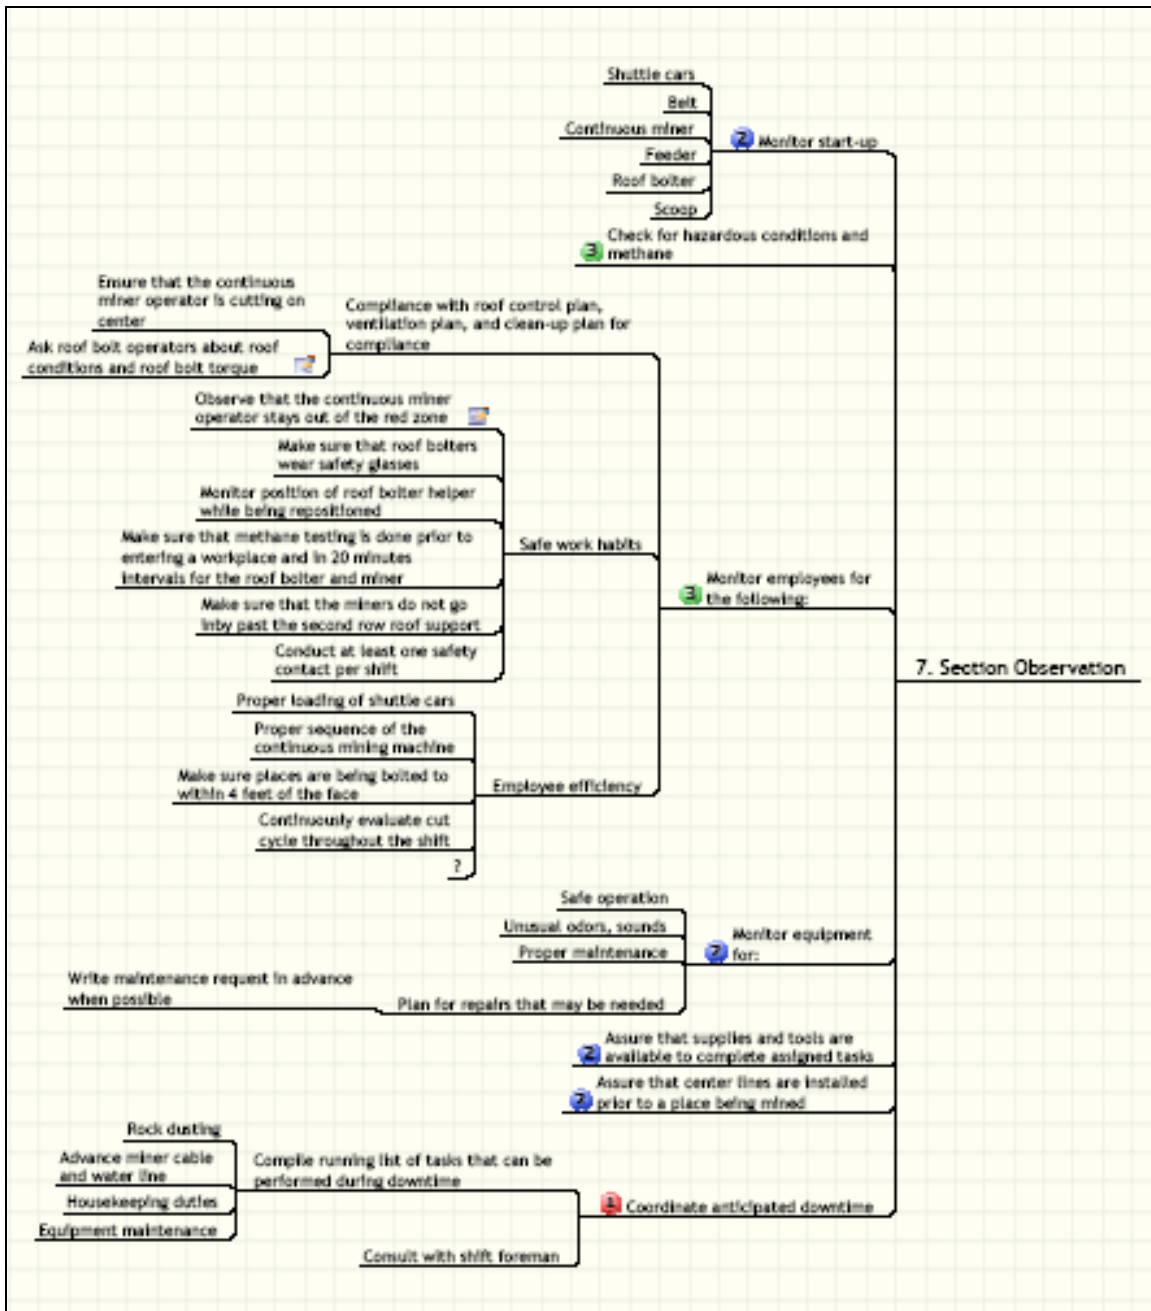

Duty 5: Traveling to the Section

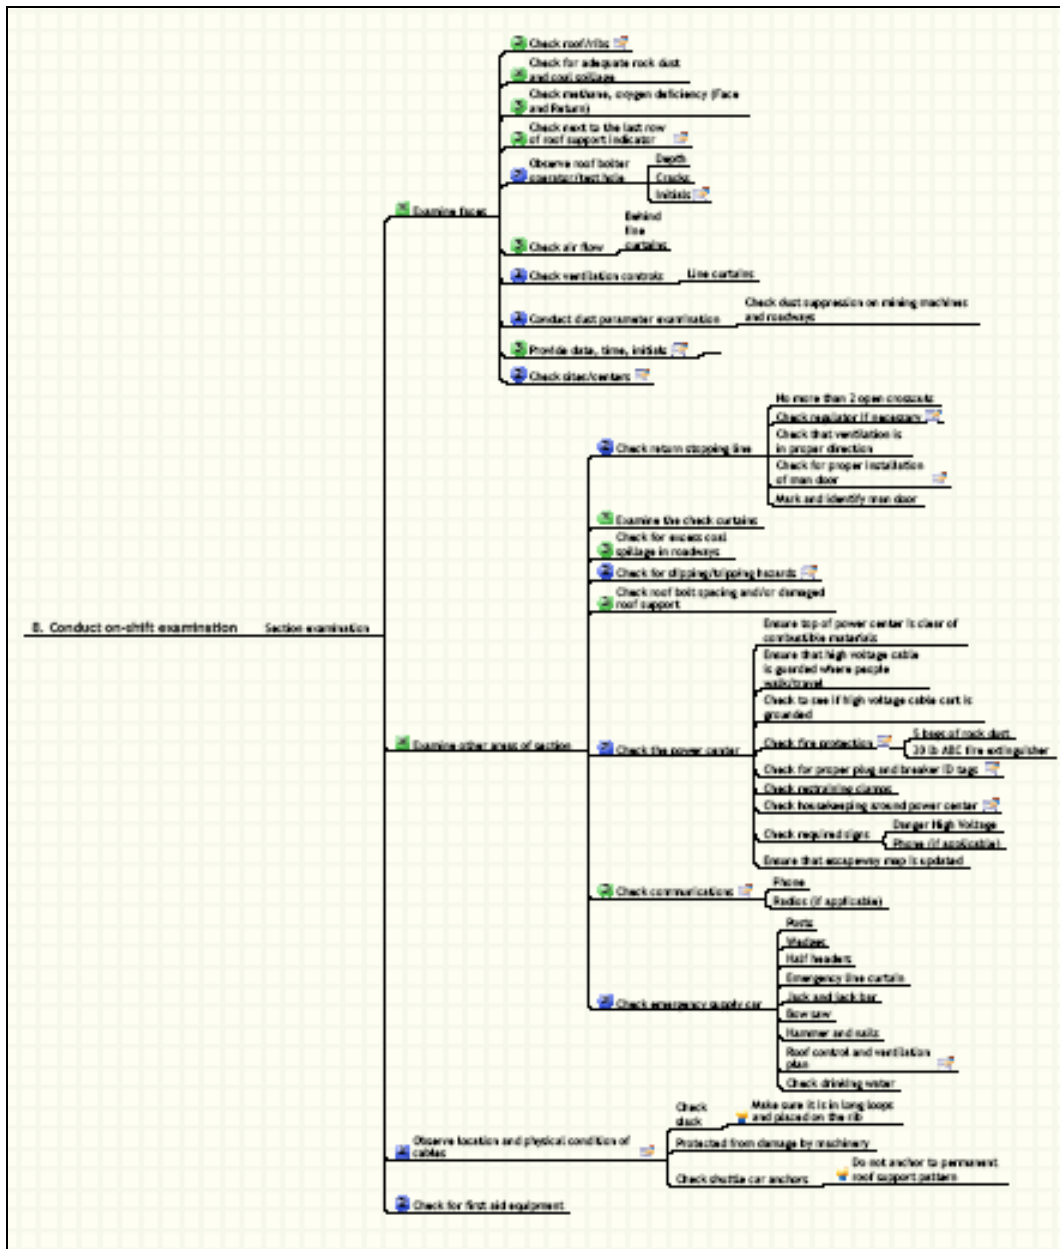

Duty 6: Arrive on the Section

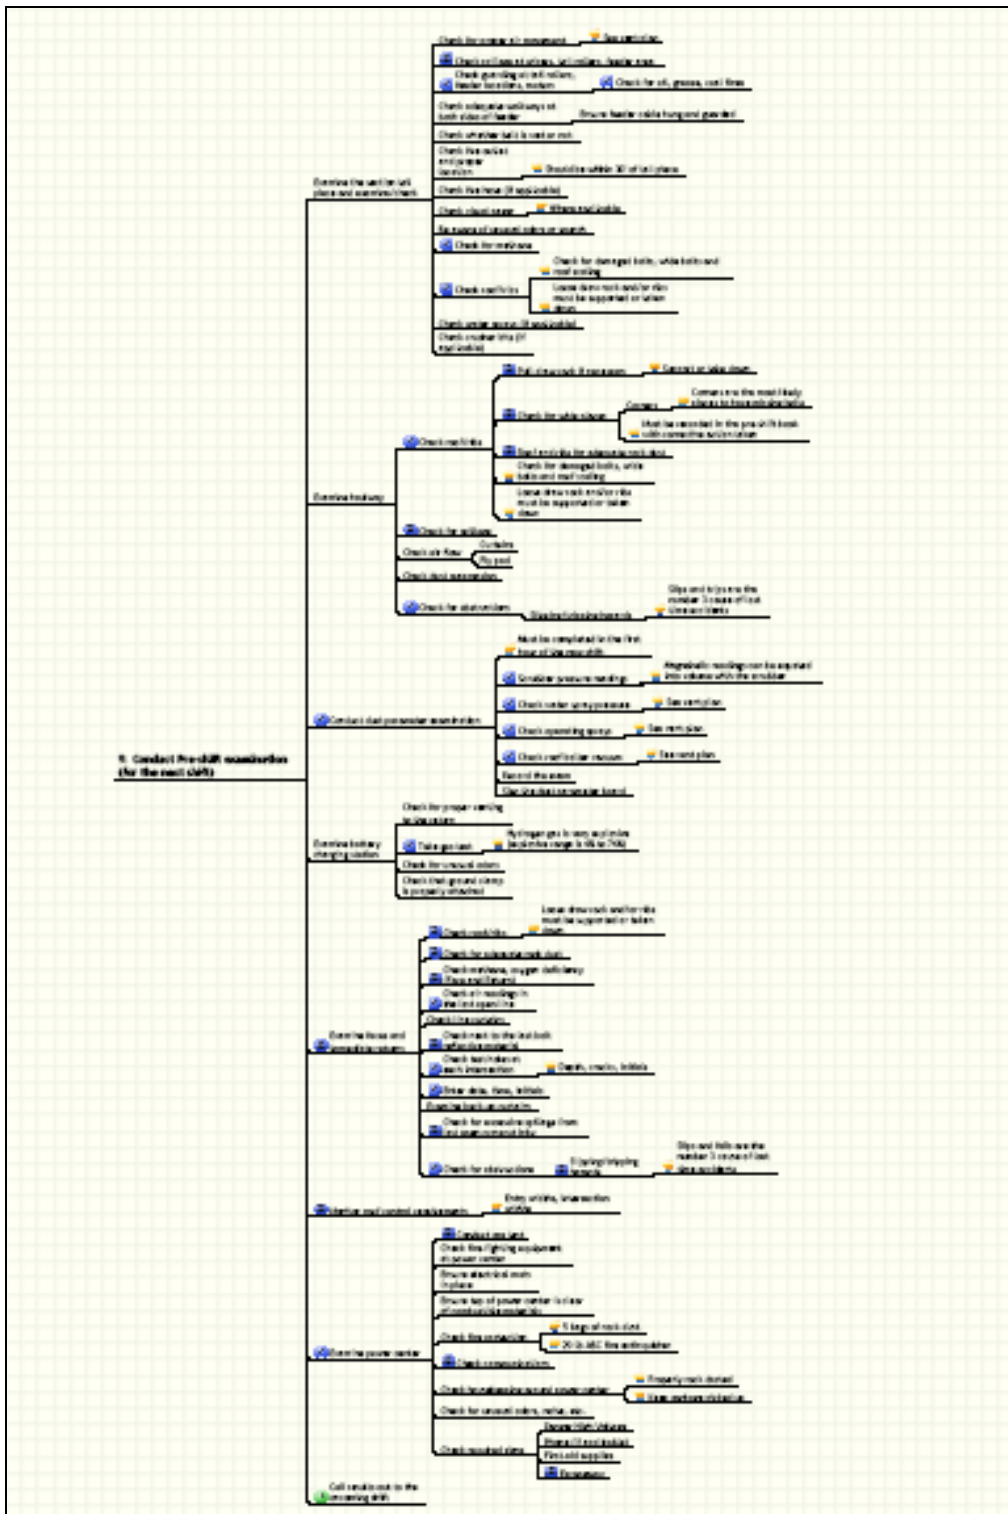

Duty 7: Section Observation

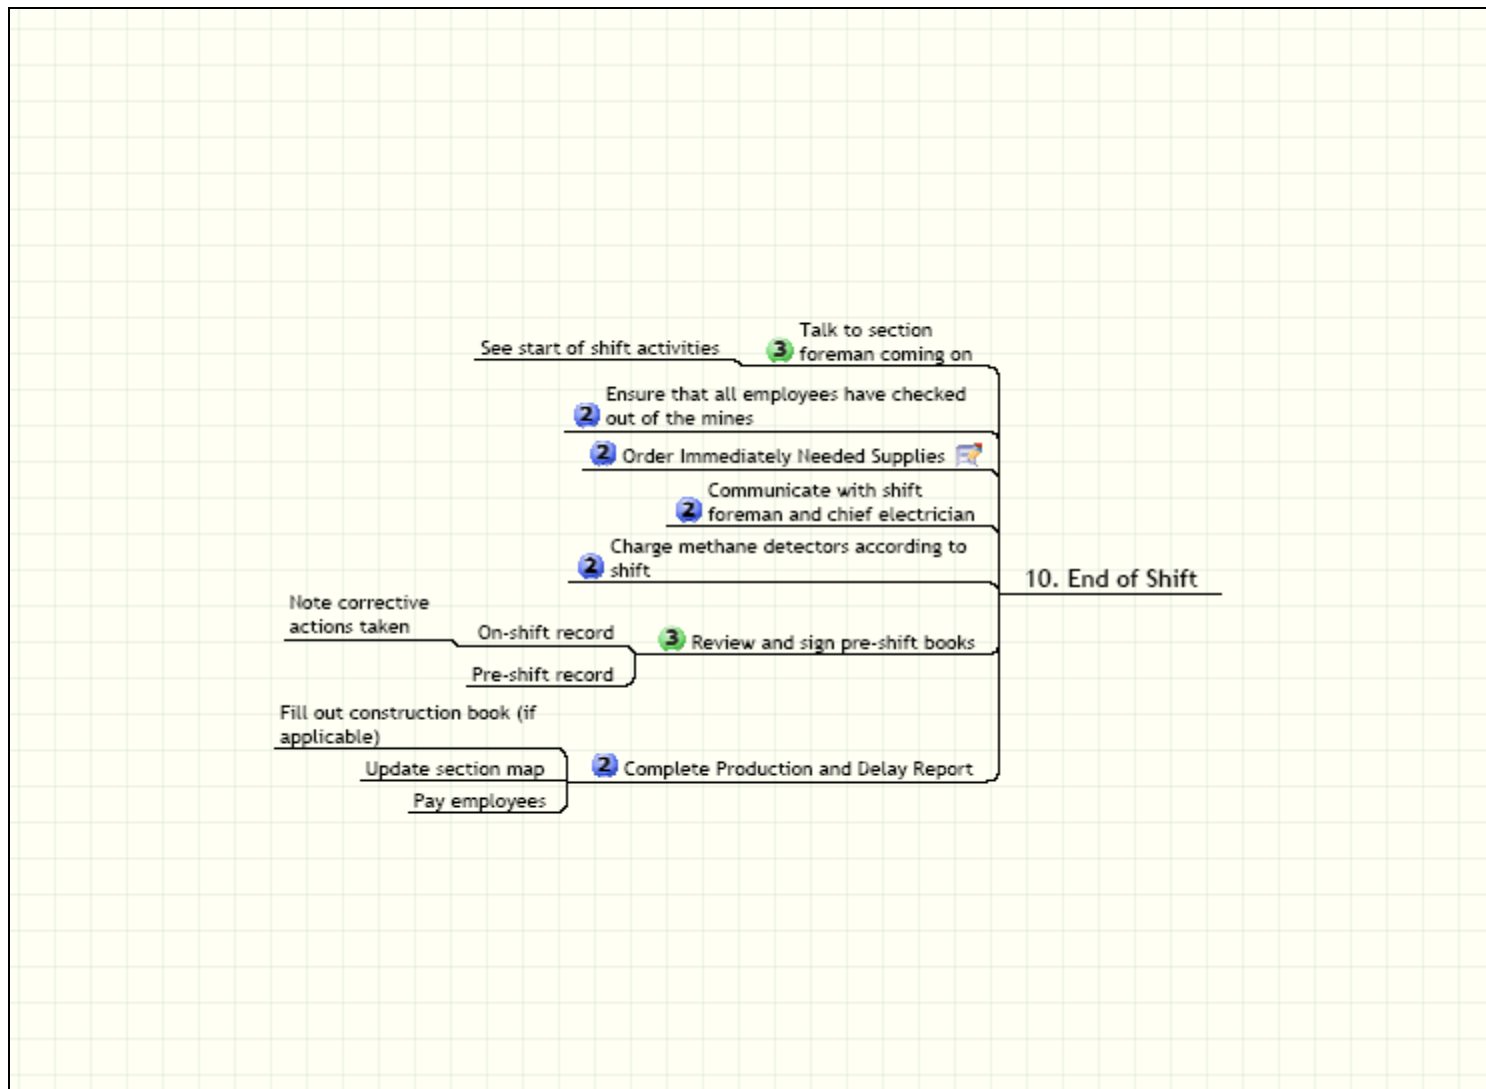

Duty 8: Conduct On-shift Examination

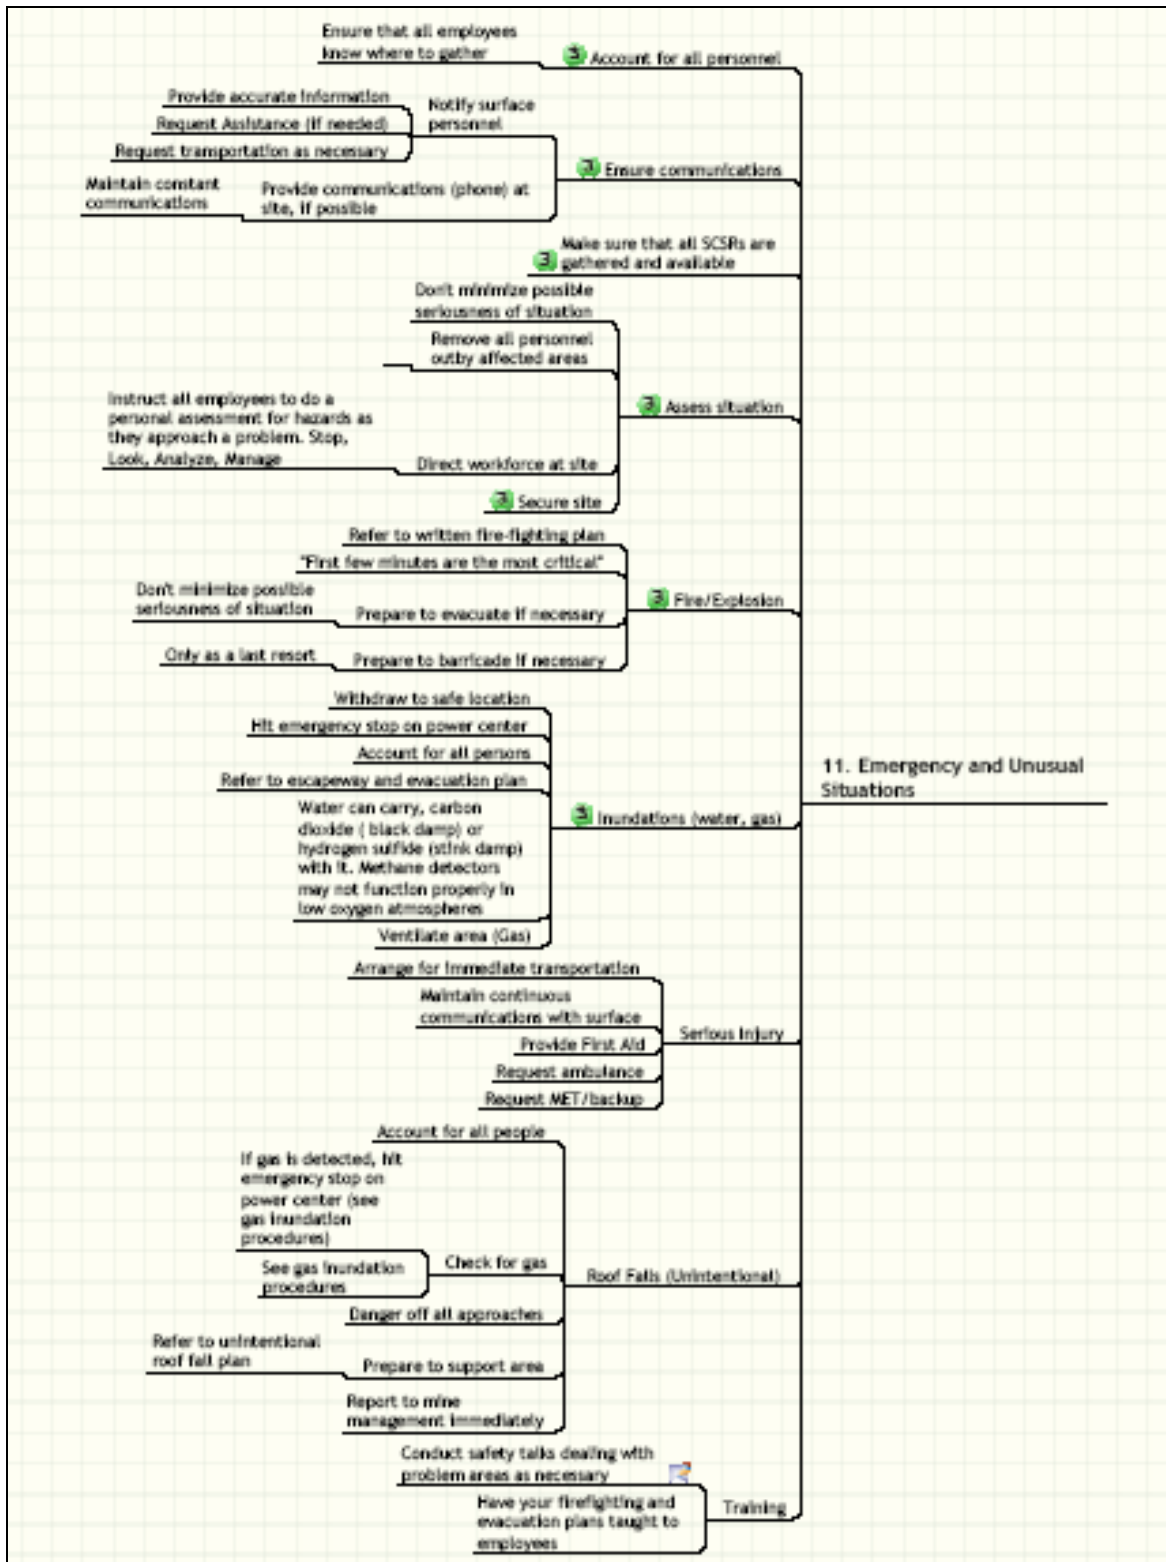

Duty 9: Conduct Pre-shift Examination

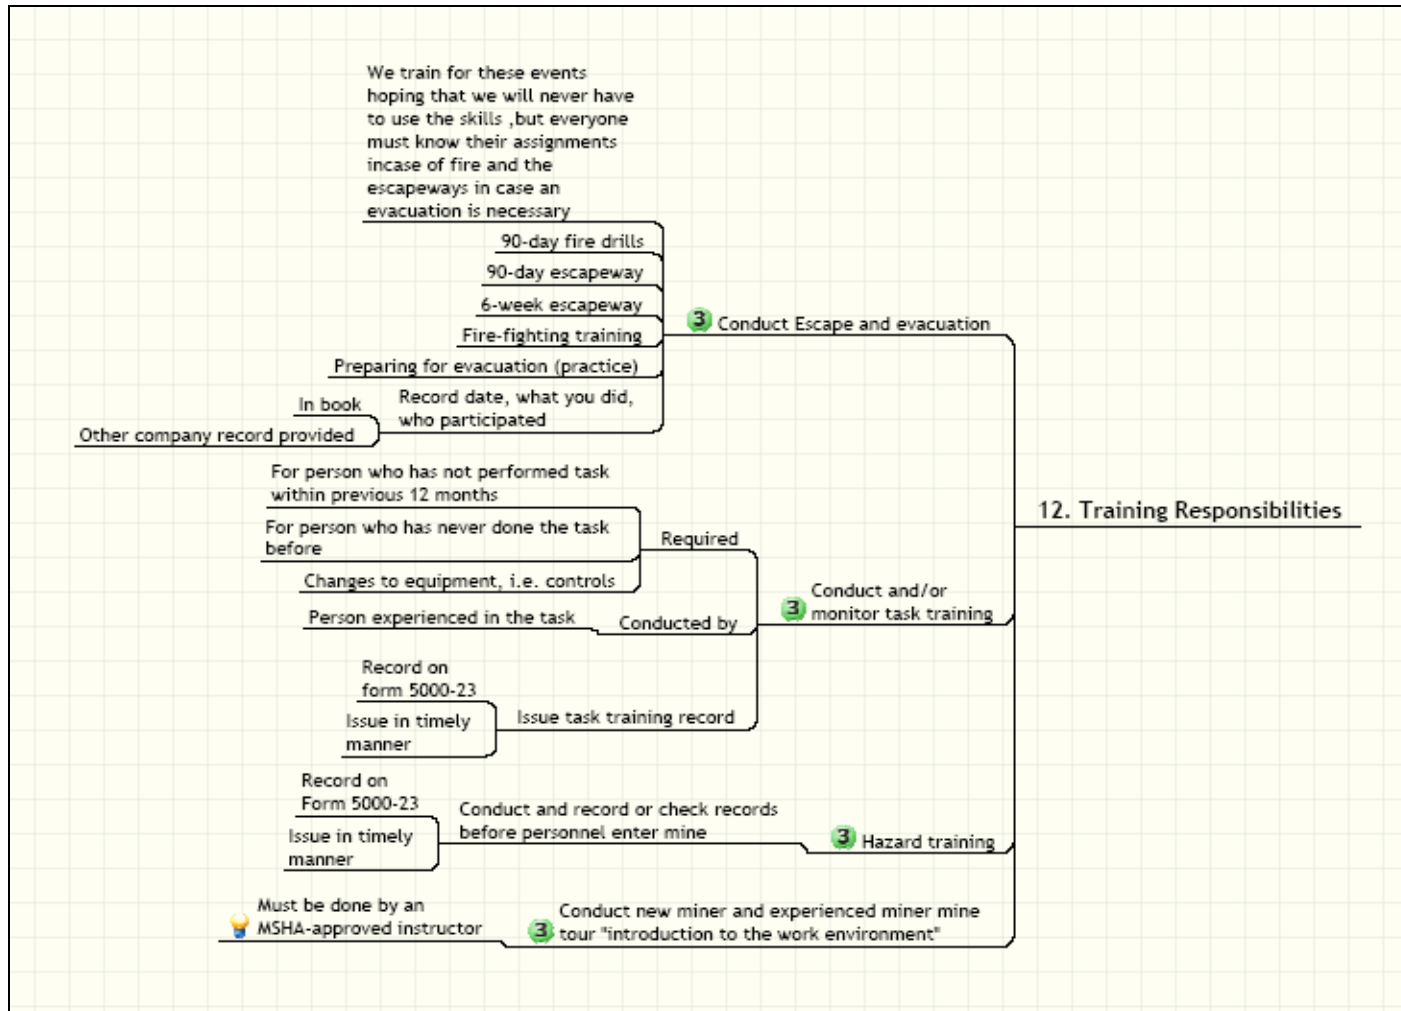

Duty 10: End of Shift

Duty 11: Emergency and Unusual Situations

Duty 12: Training Responsibilities

Appendix B: Generic JTA Worksheets

Duty 1: Self-Assessment and Personal Fitness

Learner will explain how to prepare for a safe and healthful work shift for himself/herself and crew through self-assessment and personal fitness determinations prior to start of shift. Learner will explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls. Self-assessment and personal fitness activities include the following job steps:

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
A. Conduct self-assessment		2		The crux of this section. Soft skills aspects previously included (e.g. “be friendly”) are not as important.
B. Be prepared to deal with employee problems/concerns		2		

Appendix B: Generic JTA Worksheets

Duty 2: Start-of-shift Activities

(break down into written info, face-to-face time with the previous shift foreman and a phone call)

Learner will demonstrate proper procedures for conducting start-of-shift activities. Learner will explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls.

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
A. Arrive in time to review reports and records		?		
B. Review at mine office		3		
<ul style="list-style-type: none"> • Production Reports 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Look for downtime/recurring problems 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Look at mine production runs 				
<ul style="list-style-type: none"> • Pre-shift and on-shift books of prior shifts 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Look at air quantities 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Look at methane readings 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Look for hazardous conditions noted 				
<ul style="list-style-type: none"> • Mine map 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Look for problem areas 				

Appendix B: Generic JTA Worksheets

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
<ul style="list-style-type: none"> ▪ Roof falls 				
<ul style="list-style-type: none"> ▪ Water accumulation 				
<ul style="list-style-type: none"> ○ Develop strategy 				
<ul style="list-style-type: none"> ▪ Consider cuts sequence by looking at the map 				Sequence of mining cuts (who's behind, ahead, etc.); 'cut' is shorthand for the mining process.
<ul style="list-style-type: none"> ▪ Check placement of ventilation controls 				
C. Talk to previous shift foreman		2		
<ul style="list-style-type: none"> • Discuss problems on prior shift 				
<ul style="list-style-type: none"> • Supplies needed 				
D. Take pre-shift phone call		3		
<ul style="list-style-type: none"> • Record information 				
<ul style="list-style-type: none"> • Ask about problem areas on section, supplies needed and conditions of the the section 				
<ul style="list-style-type: none"> • Sign pre-shift book 				Requirement of state and federal regulations

Duty 3: Prior to entering the mine

Learner will demonstrate proper procedures required prior to entering the mine. Learner will explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls. Activities conducted prior to entering the mine will include the following:

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
E. Check for and/or obtain necessary safety equipment		3		Inventory
<ul style="list-style-type: none"> • Methane spotter for self and equipment operators 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Check calibration, condition of instrument 				
<ul style="list-style-type: none"> • Anemometer 				Measure linear feet of air that passes through the instrument. Used to determine cubic feet of air available.
<ul style="list-style-type: none"> • SCSR 				Self-contained safety respirator. Good for one hour of breathing. Used in emergency situations.
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Perform daily exam 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Federal/state regulation 				
<ul style="list-style-type: none"> • Personal Protective Equipment 				Observe crews to make sure that they have these materials.
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Safety glasses 				

Appendix B: Generic JTA Worksheets

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
○ Safety gloves				
○ Hard toed shoes				
○ Reflective material on clothing (if available)				Not all mines provide reflective material on clothing.
○ Hard hat				
○ Dust respirator				
○ Hearing protection				
○ Cap lamp				
▪ Check battery water level				Acid-filled batteries need certain amount of water to function.
▪ Check bulb function				
▪ Check general condition				
F. Obtain necessary tools and equipment				Best to keep tools in one bag (tote?)
• Distribute methane spotters for equipment operators		2		
• Sounding device				Hammer, walking stick – used to bang on the roof of the shaft to determine its integrity. The sound that you get from hitting the ceiling will tell.

Appendix B: Generic JTA Worksheets

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
<ul style="list-style-type: none"> • Measuring tape 				
<ul style="list-style-type: none"> • Marking paint 				Can of paint
<ul style="list-style-type: none"> • Sight rods 				Rods hung from the ceiling to identify position in shaft.
<ul style="list-style-type: none"> • Chalk line and chalk 				
<ul style="list-style-type: none"> • Get section radios (if required)

problem areas				
o Supplies needed				
• Ensure employees have personal protective equipment				
• Review both pre-shift report and cut cycle with crew				Most important to review pre-shift report; cut cycle review is optional.
H. Check-in at the mine		3		
o Ensure that each employee has provided check-in tag to post outside of mine				

Appendix B: Generic JTA Worksheets

Duty 4: Entering the mine

Learner will demonstrate the proper procedures for boarding and traveling into the mine by slope car and elevator. Learner will explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls.

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
I. Conduct smoke search		3		Checking employees for cigarettes, lighters
<ul style="list-style-type: none"> Required weekly by state/federal regulations 				
<ul style="list-style-type: none"> Ask them to bucket 				
<ul style="list-style-type: none"> Ask them to remove hard hat 				
J. Board slope car (if applicable)				
<ul style="list-style-type: none"> Foreman sits at emergency stop button 				Someone always has to sit at the emergency stop button
<ul style="list-style-type: none"> Close doors if available 				
<ul style="list-style-type: none"> Call hoist man to drop car 				Hoist man is the guy that controls the slope/shaft car from the surface (pushes the buttons to lower and raise the miners to and from surface)
<ul style="list-style-type: none"> Ensure adequate seating 				
<ul style="list-style-type: none"> Ensure occupants wear safety glasses 				
K. Board elevator (if applicable)				

Appendix B: Generic JTA Worksheets

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
<ul style="list-style-type: none"> • Ensure doors are closed 				
<ul style="list-style-type: none"> • Hit down button 				
L. Board mantrip (go to item 5)				Full explanation of mantrip issues under “Travelling to the Section”

Duty 5: Travelling to the section

Learner will demonstrate the proper procedures for traveling to the section by rail and rubber-tired mantrip. Learner will explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls.

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
A. Board mantrips (rail and tire)				
<ul style="list-style-type: none"> • Conduct pre-op exam 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Lights 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Brakes 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Sanders (if required) 				Literally to drop sand on the track (for traction).
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Lifting jack and bar 				
<ul style="list-style-type: none"> <ul style="list-style-type: none"> ○ Fire extinguisher

Duty 6: Arrive on the section

Learner will demonstrate proper procedures for conducting activities upon arrival on the section. Learner will explain the job duties, why they are conducted, any associated risk, and how to implement appropriate controls.

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
A. Meet previous shift foreman at power center and discuss the following		2		
<ul style="list-style-type: none"> • Location of equipment 		1		
<ul style="list-style-type: none"> ○ What’s not roof bolted 				Bolting are the metal rods set into the roof to keep it from collapsing (not the same as ribs)
<ul style="list-style-type: none"> ○ In which entry is the miner loading 				Loading coal into the shuttlecars. Location would be the face number.
<ul style="list-style-type: none"> ○ What’s the charge on your scoops 				Battery charge on scoop machines – basically, how much power is left to these machines. Charge usually lasts as long as a shift.
<ul style="list-style-type: none"> • Any difficulties encountered between the time that he called out until he arrived on the section 				The call out of his report.
<ul style="list-style-type: none"> ○ Roof conditions 				Roof conditions change very rapidly.
<ul style="list-style-type: none"> ○ Conditions of 				

Appendix B: Generic JTA Worksheets

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
travelways				
○ Methane				CH ₄
<ul style="list-style-type: none"> ▪ These mines liberate excessive amounts of methane. 				
○ Equipment failures				
<ul style="list-style-type: none"> • Supplies on hand, including 				
○ Bolts				
○ Shuttlecar tires				
○ Materials for verification control				Blocks, metal-fabricated panels, curtains. The check curtain is a swath of material used to cordon off the cut face (to contain CH ₄).
○ Rock dust				Limestone dust put on the roof, ribs and floor to keep the coal from catching on fire. The dust was sprayed on manually or by machine.
○ Machine oil				
<ul style="list-style-type: none"> • Ensure dust parameter exam has been completed 				Dust parameter exam measures the amount of dust in a work area. If not done for you, it must be completed.

Appendix B: Generic JTA Worksheets

Job Steps	Importance Narrative (Consider Safety, Production, Maintenance)	Importance Ranking 1=Important 2= Very Important 3=Critical	Reserved	Procedures/Risk Resolution/Notes/Comments
<ul style="list-style-type: none"> ○ Look at date board 				Usually located at power center. The date board would note dust parameter exam results.
B. Monitor equipment operators				
<ul style="list-style-type: none"> • Coordinate corrective actions needed 				This sets the standard from your section.
<ul style="list-style-type: none"> • Make safety contact 				Keep your standards high.
<ul style="list-style-type: none"> • Machinery is the #2 cause of lost time injuries and a major cause of fatalities. 				
C. Verify hot seating procedures (if applicable)		1		Hot seating: operators switching control of a machine without pausing machine operation.
<ul style="list-style-type: none"> • Stop and concentrate on sounds of the section 				
<ul style="list-style-type: none"> ○ Stop look and listen for normal production sounds 				
<ul style="list-style-type: none"> • Look for normal equipment activity 				
<ul style="list-style-type: none"> • Listen for: 				
<ul style="list-style-type: none"> ○ Miner cutting 				
<ul style="list-style-type: none"> ○ Shuttle cars dumping
