

For Mac users, you can download Xmeeting to join a video conference/class. It's an open source and doesn't require a code.

The download link is:

http://xmeeting.sourceforge.net/pages/downloads_xmeeting.php

After you download Xmeeting, double-click on the Xmeeting.app icon. Then type 129.174.57.248 in the address bar, and you should see a video screen shows Codian Multipoint Control Unit.

To enter the conference you want to join, click on the Show Tools tab on the bottom of the screen, which is a wrench-like button. You should see Remote Control tab on the top, select it and click on the arrows to highlight the conference name. Click on the right arrow to select it. It will lead you to the conference/class.

Please note that you may want to use a headset with a microphone to avoid echo issues.
